SECTION I

EXECUTIVE OVERVIEW

1. EXECUTIVE SUMMARY

1.1 Company Overview

True Care System, LLC is a U.S.-based healthcare technology company developing a cloud-native Software-as-a-Service (SaaS) platform for Home Care, Intellectual & Developmental Disabilities (I/DD), Behavioral Health, and Community-Based Service providers.

The platform unifies workforce management, Electronic Visit Verification (EVV), scheduling, billing, payroll, compliance, reporting, and mobile workforce operations into a single enterprise solution.

Originally developed to solve real operational challenges within a healthcare provider organization, the platform has evolved into a commercial SaaS product designed for nationwide expansion.

1.2 Investment Opportunity

True Care System is entering its commercialization phase after more than three years of product development and operational validation.

The Company is seeking strategic investment and long-term strategic partnerships to accelerate the next phase of growth, including:

- Customer acquisition
- Product development
- Engineering expansion
- Sales & marketing
- Customer success
- National market expansion

Beyond capital, True Care System welcomes partners who contribute healthcare expertise, commercialization experience, strategic relationships, operational leadership, or

technology innovation. Management believes that the right strategic partnership can accelerate enterprise value creation more effectively than financial investment alone.

The objective is to establish True Care System as a leading enterprise healthcare management platform serving providers across the United States.

1.3 Company Highlights

- **Founded** : 2023
- **Headquarters** : Pennsylvania, USA
- **Business Model** : Software-as-a-Service (SaaS)
- **Current Product Status** : Production Ready
- **Primary Markets**
 - ✓ Home Care
 - ✓ I/DD Providers
 - ✓ Behavioral Health
 - ✓ Community-Based Services

1.4 Core Technology

- Enterprise SaaS Platform
- Native iOS & Android Applications
- Multi-Tenant Cloud Architecture
- Production Sandata EVV Integration
- HIPAA Compliance Framework
- Artificial Intelligence Ready Architecture

1.5 Financial Highlights

- Founder Development Period : **October 2023 – July 2026**
- Estimated Founders' Operational Contribution : \$1,227,000
- Founder Development Expenses : \$220,000
- Total Historical Founder Investment : **\$1,447,000**

- Commercial Launch : **2026**
- Starting Subscription Price : **\$25 per Active Individual per Month**
- Annual Price Adjustment Assumption : **5%**
- Target 2027 Annual Recurring Revenue (ARR) : **Approximately \$1.7 Million**

1.6 Investment Thesis

True Care System combines deep healthcare operational expertise with modern cloud technology to address one of the healthcare industry's most significant challenges: replacing fragmented administrative systems with a unified enterprise platform.

With a production-ready platform, validated healthcare workflows, successful production deployment, and a scalable recurring SaaS business model, True Care System has substantially reduced the technology execution risk typically associated with early-stage software companies.

Future investment is therefore expected to accelerate commercialization, customer acquisition, strategic partnerships, and nationwide expansion rather than funding the initial creation of the technology platform.

2. INVESTMENT HIGHLIGHTS

2.1 Why True Care System?

- Production-ready SaaS platform
- Proven healthcare operational expertise
- Recurring subscription revenue model
- Large and growing healthcare technology market
- Production Sandata EVV integration
- HIPAA-focused platform architecture
- Scalable multi-tenant cloud infrastructure
- AI-ready technology foundation

- Experienced founding team with significant personal investment
- Clear five-year commercialization strategy

2.2 Key Investment Metrics

Metric	Value
Development Period	Oct 2023 – July 2026
Founders' Operational Contribution	\$1,227,000
Founder Development Expenses	\$220,000
Total Historical Founder Investment	\$1,447,000
SaaS Pricing	\$25/ Individual / Month
Annual Price Increase	5%
2027 Target ARR	~\$1.7M
Target Market	U.S. Healthcare Providers
Revenue Model	Recurring SaaS Subscription

3. COMPANY OVERVIEW

True Care System was established to modernize healthcare operations through a single, integrated technology platform.

Unlike traditional software vendors that focus on individual functions, the Company delivers an enterprise solution supporting scheduling, workforce management, EVV, billing, payroll, compliance, reporting, and mobile workforce operations within one secure cloud environment.

The platform has been developed over more than three years through continuous investment by its founders and has reached a stage where commercial expansion is now the Company's primary strategic objective.

4. MISSION, VISION & CORE VALUES

4.1 Mission

To simplify healthcare operations through innovative technology that improves efficiency, strengthens compliance, and enables providers to deliver higher-quality care.

4.2 Vision

To become one of the most trusted healthcare technology platforms supporting provider organizations across the United States.

4.3 Core Values

- Customer Success
- Innovation
- Integrity
- Security & Compliance
- Operational Excellence
- Continuous Improvement
- Long-Term Partnership

5. INVESTMENT SNAPSHOT

Metric	Value
Development Started	October 2023
Current Status	Production Ready
Commercial Launch	2026
Founders' Operational Contribution	\$1,227,000
Founder Development Expenses	\$220,000
Total Founder Investment	\$1,447,000
Business Model	Healthcare SaaS

Metric	Value
Revenue Model	Recurring Subscription
Initial Market	Pennsylvania
Expansion Strategy	Nationwide

SECTION II

LEADERSHIP & FOUNDER VALUE CREATION

1. FOUNDER STORY

1.1 Building a Healthcare Platform from Real-World Experience

True Care System was founded with a simple vision: to eliminate fragmented healthcare operations by building one integrated platform capable of managing the entire provider organization.

Rather than starting with a software concept, the founders began with firsthand experience operating a healthcare provider. Daily exposure to disconnected systems, repetitive administrative work, regulatory complexity, and inefficient workflows revealed a significant opportunity for innovation.

In October 2023, the founding team initiated the development of True Care System as a long-term technology investment. Over the following three years, they personally funded product development, led system architecture, designed healthcare workflows, and guided the platform from concept to a production-ready enterprise SaaS solution.

Today, True Care System represents the result of thousands of hours of executive leadership, software planning, healthcare operational expertise, and continuous product development—all completed prior to seeking institutional investment.

The founders are now seeking strategic partners who can complement this foundation with healthcare industry expertise, technology capabilities, commercialization experience, and access to provider networks across multiple states.

1.2 Why We Built True Care System

The founders identified several recurring challenges shared by healthcare providers:

- Fragmented software systems
- Manual administrative processes
- Increasing regulatory complexity
- Workforce shortages
- Limited operational visibility
- Inefficient billing and payroll workflows
- Lack of integrated reporting
- Rising operating costs

Instead of addressing these challenges with isolated applications, the founders chose to build a unified enterprise platform capable of supporting every major operational function within a healthcare organization.

This long-term vision continues to guide the Company's product strategy and commercial growth.

2. EXECUTIVE LEADERSHIP TEAM

2.1 Dr. Van Duong Chau - Founder & Chief Executive Officer

Dr. Van Duong Chau is the Founder and Chief Executive Officer of True Care System, LLC.

He brings more than twenty years of executive leadership experience in organizational management, strategic planning, and educational leadership. Since relocating to the United States, he has focused on healthcare operations and technology innovation, leading the development of True Care System from its initial concept to a production-ready SaaS platform.

As CEO, Dr. Chau is responsible for:

- Corporate strategy
- Product vision
- Technology roadmap

- Enterprise architecture
- Business analysis
- System architecture and technology oversight
- Strategic partnerships
- Capital planning
- Investor relations
- Long-term business growth

His leadership has been instrumental in transforming operational healthcare experience into a scalable technology platform designed for nationwide commercialization.

2.2 Thi Thuy Hang Tran, MHA - Co-Founder & Chief Operating Officer

Thi Thuy Hang Tran serves as Co-Founder and Chief Operating Officer.

She holds a **Master's Degree in Healthcare Administration** and contributes extensive experience in healthcare operations, quality management, and organizational leadership.

Ms. Tran oversees operational planning, workflow optimization, customer implementation, and organizational development. She plays a key role in ensuring that the platform reflects the practical needs of healthcare providers while maintaining a strong focus on regulatory compliance and operational excellence.

Her responsibilities include:

- Healthcare operations
- Product workflow design
- Customer implementation
- Quality improvement
- Quality assurance and user acceptance testing
- Product validation
- Business operations
- Customer success

2.3 Tu Chau - Co-Founder & Project Director

Bachelor of Healthcare Administration Candidate

Tu Chau serves as Project Director and leads project coordination, implementation planning, quality assurance, and cross-functional execution.

He has contributed significantly to system implementation, testing, documentation, release management, and product quality throughout the Company's development.

His responsibilities include:

- Project management
- Product implementation
- Implementation coordination
- Release documentation
- Quality assurance
- System testing
- Documentation
- Product releases
- Customer implementation support

2.4 Leadership Philosophy

The founders believe that technology should simplify healthcare operations rather than increase administrative complexity.

Every major product decision is evaluated based on four principles:

- Improve operational efficiency.
- Strengthen regulatory compliance.
- Enhance workforce productivity.
- Deliver measurable value to healthcare providers.

This philosophy has guided the Company's development since its inception and remains central to its long-term growth strategy.

The same philosophy will guide the Company's selection of future investors and strategic partners. The founders intend to work with partners whose expertise, relationships, and

long-term objectives are aligned with the mission of expanding True Care System across multiple healthcare markets.

3. HISTORICAL FOUNDER CONTRIBUTIONS

3.1 Building Enterprise Value Before Seeking Investment

Unlike many technology startups that seek external funding during the early development stage, the founders of True Care System chose to build a commercially viable product before approaching investors.

From October 2023 through July 2026, the founding team personally invested substantial time, expertise, leadership, and financial resources into the creation and commercialization preparation of the Company's technology platform.

Their contributions extended far beyond software development and included executive leadership, healthcare operations, business strategy, regulatory implementation, product design, customer validation, and commercialization planning.

3.2 Areas of Contribution

The founders collectively led the following initiatives:

3.2.1 Executive Leadership

- Corporate strategy
- Business planning
- Product vision
- Investment planning

3.2.2 Product Strategy

- Product roadmap
- Feature prioritization
- User experience planning
- Workflow optimization

3.2.3 Technology Development

- Enterprise architecture

- SaaS platform design
- Mobile application planning
- Cloud infrastructure
- Security architecture

3.2.4 Healthcare Operations

- Clinical workflow design
- Workforce management
- Scheduling optimization
- Billing workflows
- Payroll workflows
- Compliance processes

3.2.5 Regulatory Compliance

- HIPAA implementation
- Electronic Visit Verification (EVV)
- Sandata Production integration
- Security controls
- Audit framework

3.2.6 Commercialization

- Market research
- Product positioning
- Business model development
- Customer implementation planning
- Investor preparation

3.2.7 Historical Development Timeline

Year	Major Milestones
2023	Product concept, healthcare workflow research, market analysis, enterprise architecture, and initial platform planning and development
2024	Core platform modules, scheduling, workforce management, reporting, mobile foundation
2025	Billing, Payroll, HIPAA Framework, Behavioral Support Services, and Mobile Applications
2026	Sandata Production integration, HIPAA and audit framework expansion, production readiness, enterprise documentation, commercialization planning, and investor preparation

3.2.8 Value Creation Before External Capital

By the time the Company initiated discussions with strategic investors, the founders had already completed:

- Enterprise SaaS Platform
- Native Mobile Applications
- Multi-Tenant Cloud Architecture
- HIPAA Compliance Framework
- Production Sandata Integration
- Workforce Management System
- Billing Platform
- Payroll Foundation
- Reporting & Analytics
- Executive Dashboard
- Behavioral Support Services Module
- Enterprise Documentation Framework

This foundation significantly reduces initial technology development risk and allows future capital and strategic partnership resources to focus primarily on commercialization, customer acquisition, organizational growth, technology enhancement, and multi-state expansion.

4. FOUNDERS' OPERATIONAL CONTRIBUTION VALUATION

4.1 Founder Commitment

Since the inception of True Care System in October 2023, the founding team has invested significant professional time, executive leadership, technical expertise, and operational knowledge into the design, development, validation, and commercialization of the Company's enterprise healthcare platform.

Rather than receiving market-rate compensation during the development phase, the founders chose to reinvest their efforts into building long-term enterprise value. This commitment enabled the Company to develop a production-ready healthcare platform before seeking external investment.

The following analysis presents an estimated market-equivalent value of the founders' professional contributions using rates associated with comparable executive, healthcare operations, technology architecture, implementation, and project leadership responsibilities.

4.2 Founder Contribution Assumptions

The estimated value of founder contributions is based on the following assumptions:

Item	Assumption
Development Period	October 2023 – July 2026
Founder Contributions	Based on each founder's actual estimated time commitment during the development period
Hourly Rates	Based on comparable market rates for executive and project leadership positions

Item	Assumption
Total Development Period	Approximately 34 Months (2.83 Years)
Total Hours of Founders	9,760 Hours

Note: The estimated founder hours are based on each founder's level of participation, responsibilities, and time commitment during the development of True Care System from October 2023 through July 2026. The rates are intended solely to illustrate the market-equivalent value of the professional services contributed and do not represent salaries paid or amounts currently owed by the Company.

4.3 Founder Market-Equivalent Rates

Founder	Primary Roles	Market-Equivalent Rate
Van Duong Chau	Founder & CEO, Business Analyst, System Architect	\$170
Thi Thuy Hang Tran	Co-Founder & COO, Healthcare Operations, QA Lead	\$115
Tu Chau	Co-Founder & Project Director, Implementation, Documentation	\$95

4.4 Estimated Founders' Operational Contribution

Founder	Total Hours	Market-Equivalent Rate	Estimated Value
Van Duong Chau	3,000	\$170	\$544,000
Thi Thuy Hang Tran	3,740	\$115	\$460,000
Tu Chau	3,020	\$95	\$323,000
Total	9,760	—	\$1,227,000

4.5 Distribution of Founder Contributions

The founders' contributions extended well beyond software engineering and included executive leadership, healthcare operations, strategic planning, technology architecture, commercialization, regulatory implementation, and organizational development.

Area of Contribution	Estimated Allocation
Executive Leadership & Strategic Planning	20%
Product Strategy & Roadmap	15%
Enterprise Architecture & Technology Leadership	20%
Healthcare Operations & Workflow Design	15%
Software Development Oversight	10%
HIPAA, EVV & Regulatory Compliance	8%
Quality Assurance & Testing	5%
Documentation & Knowledge Management	4%
Commercialization & Business Development	3%

The allocation is presented as a high-level summary of the founders' collective contributions and is not intended to assign each activity exclusively to a single founder.

4.6 Why Founders' Operational Contribution Matters

The estimated Founders' Operational Contribution represents the economic value of the professional services contributed during the Company's development phase.

These contributions enabled True Care System to reach commercialization without relying on institutional venture capital during its formative years.

As a result, future investment and strategic partnership resources can be directed primarily toward customer acquisition, implementation capacity, engineering enhancement, sales

and marketing, provider-network development, and multi-state expansion rather than the initial creation of the core platform.

4.7 Founder Alignment with Investors

The founders remain committed to the long-term success of True Care System.

Their objective is to build a sustainable healthcare technology company that delivers recurring revenue, continuous innovation, and long-term value for customers, employees, and shareholders.

The founders intend to remain actively involved in the Company's leadership, product direction, and long-term development following any future investment transaction. Their priority is to establish an ownership and governance structure that aligns the interests of the founders and strategic partners while supporting the strongest possible path for commercial growth.

The founders are initially prepared to consider an investment structure involving up to 49% ownership. However, they remain open to discussing alternative structures with an exceptional strategic partner whose healthcare expertise, provider relationships, technology capabilities, or commercialization resources could materially accelerate the Company's multi-state expansion and long-term value.

5. FOUNDER DEVELOPMENT EXPENSES

5.1 Direct Founder-Funded Development Expenses

In addition to contributing professional services, the founders have personally funded the development of True Care System since October 2023.

These expenses were funded without institutional financing and supported the Company's transition from concept to a production-ready enterprise SaaS platform.

The founders have financed essential infrastructure, software subscriptions, regulatory compliance activities, business operations, and commercialization efforts using personal resources.

5.2 Historical Investment Categories

Category	Description
Cloud Infrastructure	Vercel, Render, Supabase, cloud hosting services
Software Development Tools	GitHub, development software, testing tools
Mobile Platforms	Apple Developer Program, Google Play Developer Program
Domain & Web Services	Domain registration, DNS, SSL certificates
Technology Equipment	Computers, peripherals, testing devices
Office Operations	Office rent, electricity, water, internet, and office utilities
Legal & Corporate	Company formation, legal consultation, contracts
Accounting & Tax	Accounting, bookkeeping, tax preparation, and related professional services
Marketing & Branding	Website, promotional materials, brand development
Business Travel	Customer meetings, conferences, partner discussions
Miscellaneous Operating Costs	Office supplies, subscriptions, administrative expenses

5.3 Founder Investment Philosophy

Throughout the development period, the founders prioritized long-term product quality over short-term financial return.

Instead of minimizing investment during the early stages, they deliberately committed both financial resources and professional expertise to establish a scalable enterprise platform capable of supporting future commercialization.

This disciplined investment approach has resulted in a mature technology platform and significantly reduced execution risk for future investors.

5.4 Historical Investment Summary

By the end of July 2026, the founders had contributed to the Company through two primary forms of investment:

Investment Type	Estimated Value
Founders' Operational Contribution	\$1,227,000
Founder Development Expenses	\$220,000
Total Historical Founder Investment	\$1,447,000

Founder Development Expenses represent the founders' direct out-of-pocket expenditures incurred during the development and commercialization preparation of True Care System, including technology infrastructure, software and cloud services, office operations, equipment, legal and professional services, marketing, business development, and other project-related operating expenses.

The total historical founder investment is presented as evidence of the founders' financial and professional commitment and should not be interpreted as an independent valuation of the Company.

SECTION III

PRODUCT & TECHNOLOGY

1. PRODUCT PORTFOLIO

1.1 Enterprise Healthcare Management Platform

True Care System is a cloud-based Software-as-a-Service (SaaS) platform designed to help healthcare providers manage their daily operations through a single, integrated solution.

The platform is designed to reduce reliance on fragmented software systems by providing a unified environment for healthcare operations, workforce management, compliance, billing, payroll, reporting, and mobile workforce activities.

Designed with scalability in mind, the platform supports organizations ranging from small agencies to multi-location healthcare providers.

1.2 Core Business Modules

The platform currently includes the following integrated modules:

- Dashboard & Business Intelligence
- Provider Management
- Individual Management
- Employee Management
- Scheduling & Workforce Management
- Electronic Visit Verification (EVV)
- Billing & Claims Management
- Payroll Management
- Human Resources
- Behavioral Support Services (BSS)
- Health & Incident Reporting
- Compliance Management

- Document Management
- Reporting & Analytics
- System Administration

These categories represent the platform's primary commercial and operational modules. The detailed engineering development model presented later in this memorandum separates certain platform capabilities, infrastructure functions, mobile applications, security controls, and deployment activities into additional technical work modules for estimation purposes.

The modules operate within a shared data environment, allowing information to move across authorized workflows while reducing duplicate data entry and improving operational visibility

1.3 Platform Benefits

Depending on customer configuration, implementation, and use, True Care System is intended to help healthcare providers:

- Improve operational efficiency
- Streamline workforce management
- Enhance regulatory compliance
- Reduce administrative workload
- Increase billing accuracy
- Improve reporting and decision-making
- Support mobile field staff
- Scale operations through cloud technology

1.4 Commercial Readiness

Following approximately 34 months of development and operational validation, the platform has reached commercial readiness, with core workflows operating in a production environment and additional capabilities continuing to be enhanced.

The Company's ongoing product strategy focuses on controlled enhancement, implementation readiness, security, scalability, and usability as the platform enters broader commercialization.

2. ENTERPRISE SAAS PLATFORM

2.1 Cloud-Native Architecture

True Care System is built as a cloud-native Software-as-a-Service platform, enabling healthcare organizations to securely access the system from any location without maintaining on-premises infrastructure.

The platform is designed to support multiple provider organizations within a secure multi-tenant environment using provider-level access controls and logical separation of customer data.

2.2 Key Platform Capabilities

- Cloud-based deployment with security controls
- Multi-tenant architecture
- Role-based access control
- Near-real-time data synchronization across supported workflows
- Centralized document management
- Configurable workflows
- Automated notifications
- Comprehensive reporting
- Scalable infrastructure
- Controlled software releases and updates

2.3 Designed for Growth

The platform architecture supports future expansion through modular development, allowing new features, integrations, and healthcare programs to be introduced with limited impact on existing operations when properly planned and tested.

This modular design is intended to help the Company respond to evolving customer needs, operating models, and regulatory requirements.

3. MOBILE APPLICATIONS

3.1 Workforce Mobility

True Care System includes mobile applications for iOS and Android, enabling field staff to perform supported job functions while working in community-based settings.

The mobile experience is designed to simplify field workflows, improve communication between office and direct-care staff, and provide timely access to authorized operational information.

3.2 Core Mobile Features

- Employee scheduling
- Visit management
- Electronic Visit Verification (EVV)
- GPS-supported check-in and check-out
- Shift notifications
- Shift claim functionality
- Health & Incident reporting
- Authorized document access
- Operational alerts and communication
- Assigned task visibility

3.3 Supporting Healthcare Professionals

By providing authorized information and workflow tools directly to field staff, the mobile applications are intended to reduce paperwork, support more timely documentation, and improve communication between caregivers and office personnel.

4. ELECTRONIC VISIT VERIFICATION (EVV)

4.1 Supporting Regulatory Compliance

Electronic Visit Verification (EVV) is an essential component of healthcare service delivery and regulatory compliance.

True Care System incorporates EVV functionality into scheduling and workforce workflows to support visit capture, documentation, review, and required data exchange.

4.2 EVV Capabilities

- Mobile visit check-in and check-out
- GPS-supported location capture
- Visit and service documentation
- Visit exception review
- Service verification
- Audit history
- Compliance-oriented reporting

4.3 Sandata Integration

True Care System includes a production integration pathway with Sandata for the transmission of supported employee, Individual, and visit records. The integration has been implemented and tested using production endpoints and is intended to support participating providers' EVV data-submission workflows.

Provider eligibility, payer requirements, Sandata configuration, data acceptance, and ongoing compliance remain subject to the applicable program rules, implementation requirements, and third-party systems.

5. HIPAA COMPLIANCE FRAMEWORK

5.1 Security by Design

Protecting healthcare information is a core design principle of True Care System.

The platform incorporates administrative, technical, application, and operational controls intended to support healthcare organizations in managing sensitive information securely and responsibly.

5.2 Security Features

- Role-based permissions
- User authentication and session controls
- Audit logging
- User and activity history
- PHI access monitoring
- Secure application communications
- Encryption controls for supported data flows and storage services
- Security event tracking
- Provider-level data isolation
- Support-session and impersonation audit history

5.3 Compliance Support

True Care System is designed to assist healthcare providers in maintaining operational processes that align with applicable privacy and security requirements while supporting accountability and transparency throughout the organization.

Use of the platform does not, by itself, establish or guarantee a customer's compliance with HIPAA or other legal requirements. Each provider remains responsible for its own policies, workforce practices, risk assessments, configurations, and regulatory obligations.

6. ARTIFICIAL INTELLIGENCE ROADMAP

6.1 Preparing for the Next Generation of Healthcare Technology

Artificial Intelligence (AI) represents an important opportunity to improve operational efficiency, automate administrative tasks, and support data-driven decision-making within healthcare organizations.

True Care System has been designed with a flexible architecture that will support the future integration of AI-powered capabilities.

6.2 Planned AI Initiatives

Subject to available resources, customer demand, regulatory review, and appropriate governance, future development may include:

- Intelligent scheduling assistance
- Workforce optimization
- Predictive staffing analysis
- Operational analytics
- Automated documentation support
- Compliance monitoring
- Executive decision support
- Business performance insights

Any future AI capabilities are expected to be introduced in phases and evaluated for privacy, security, human oversight, data quality, clinical and operational appropriateness, and applicable regulatory requirements.

7. TECHNOLOGY ARCHITECTURE

7.1 Modern Technology Foundation

True Care System is built using modern cloud technologies that emphasize scalability, reliability, security, and maintainability.

The platform follows a modular application architecture, allowing major functional areas to be maintained and enhanced within a unified enterprise ecosystem.

7.2 Technology Principles

- Cloud-based infrastructure
- Modular application architecture
- Secure API communication
- Scalable database design
- Web and mobile accessibility
- Controlled CI/CD and release management
- Availability, backup, and recovery planning
- Layered security controls
- Multi-tenant provider isolation
- Auditability and operational monitoring

These principles provide a practical foundation for continued product development, customer growth, security enhancement, and long-term system maintainability.

8. COMPETITIVE ADVANTAGES

8.1 A Unified Healthcare Platform

Unlike many solutions that require providers to manage multiple disconnected systems, True Care System delivers an integrated platform designed to support key operational, administrative, workforce, reporting, and compliance-related workflows within healthcare provider organizations.

8.2 Competitive Strengths

- Unified enterprise platform
- Built from real provider operating workflows

- Integrated workforce management
- Mobile applications for field staff
- Electronic Visit Verification (EVV)
- Production Sandata integration pathway
- HIPAA-focused security and audit framework
- Cloud-based deployment
- Scalable multi-tenant architecture
- Modular product design
- Operational and financial reporting
- Continuous product improvement

8.3 Long-Term Vision

The Company's long-term objective is to expand True Care System into a multi-state healthcare SaaS platform serving provider organizations across a range of home- and community-based service models.

Achieving this objective will require continued product development, regulatory adaptation, implementation capacity, customer support, and strategic partnerships with individuals or organizations that contribute healthcare expertise, technology capabilities, market access, or provider-network relationships.

The Company intends to pursue this growth in a disciplined manner while maintaining a strong focus on security, operational usefulness, customer success, and sustainable recurring revenue.

SECTION IV

MARKET OPPORTUNITY

1. INDUSTRY OVERVIEW

1.1 A Growing Demand for Healthcare Technology

Healthcare providers in the United States continue to face increasing administrative, workforce, reimbursement, documentation, and compliance demands. These operating challenges create a practical need for technology platforms that help organizations coordinate staff, manage service delivery, maintain records, support billing workflows, and improve access to operational information.

Cloud-based healthcare software can help providers consolidate selected functions within a common operating environment. However, purchasing decisions are typically influenced by product reliability, regulatory fit, implementation requirements, pricing, customer support, and the provider's existing technology environment.

True Care System is being developed and commercialized in response to these practical operating needs, with an initial focus on organizations delivering home- and community-based services.

1.2 Industry Drivers

Several long-term trends are contributing to sustained demand for healthcare management software:

- Growth in home- and community-based services
- Increasing regulatory and documentation requirements
- Workforce shortages and scheduling complexity
- Digital transformation initiatives
- Demand for operational efficiency
- Increasing focus on service quality, accountability, and measurable outcomes
- Growing reliance on mobile tools for field-based and community-based workforces
- Need for improved coordination between office personnel and direct-care staff

These conditions create an opportunity for healthcare-focused SaaS platforms that can demonstrate practical workflow value, dependable implementation, appropriate security controls, responsive customer support, and alignment with provider operating requirements.

2. TARGET MARKET

2.1 Initial Market Focus

True Care System's initial commercialization strategy focuses on healthcare providers delivering home- and community-based services in Pennsylvania, where the founders have direct operating experience and familiarity with provider workflows, workforce requirements, Electronic Visit Verification, and state-specific administrative processes.

The Company's initial target customers include organizations providing:

- Home Care Services
- Intellectual and Developmental Disabilities (I/DD) Services
- Behavioral Health Services
- Home- and Community-Based Programs
- Residential and Community Living Services

This focused approach is intended to help the Company refine customer onboarding, implementation, support, pricing, and product-market fit before committing substantial resources to additional states.

2.2 Customer Profile

The platform is designed for healthcare organizations seeking to reduce dependence on multiple disconnected systems and manage selected operational functions within a more integrated environment.

- Typical customers include providers that require:
- Workforce scheduling and employee coordination
- Mobile support for field-based staff

- Electronic Visit Verification (EVV)
- Visit review and service documentation
- Billing and payroll workflow support
- Compliance-related workflow and audit support
- Operational and financial reporting
- Multi-location or multi-program management
- Role-based access and provider-level data controls

2.3 Ideal Early Customer Profile

During the initial commercialization phase, True Care System expects to prioritize providers that:

Customer Characteristic	Initial Fit
Geographic Focus	Pennsylvania-based or operating in nearby markets
Service Model	Home Care, I/DD, Behavioral Health, residential, or community-based services
Operational Need	Seeking improved coordination across scheduling, workforce, EVV, billing, payroll, compliance, and reporting
Organization Size	Small to mid-sized providers with growth potential
Implementation Readiness	Management team prepared to participate in workflow review, data preparation, training, and onboarding
Technology Need	Interested in consolidating selected operational functions within a cloud-based platform
Partnership Potential	Willing to provide structured product feedback during early commercialization

3. PHASED MARKET EXPANSION

3.1 Expansion Strategy

The Company intends to pursue geographic expansion in stages, allowing product configuration, implementation procedures, customer support capacity, regulatory review, and commercial resources to develop alongside customer growth.

✓ **Phase 1:** Pennsylvania

Acquire initial provider customers, validate pricing and onboarding assumptions, refine implementation procedures, and strengthen customer support processes.

✓ **Phase 2:** Neighboring States

Evaluate and enter selected neighboring or regional states based on provider demand, regulatory requirements, EVV integration needs, implementation cost, and the availability of qualified partners or customer relationships.

✓ **Phase 3:** National Expansion

Pursue broader multi-state expansion in markets where the Company has demonstrated product fit, implementation capability, regulatory readiness, customer support capacity, and a sustainable customer acquisition model.

This phased approach is intended to reduce expansion risk, preserve implementation quality, and allow management to allocate product, compliance, sales, and support resources according to demonstrated market demand.

3.2 Role of Strategic Partners in Expansion

Multi-state expansion will require more than financial capital. It will also require knowledge of state-specific provider operations, Medicaid and EVV environments, implementation practices, enterprise sales, customer support, and healthcare technology commercialization.

True Care System therefore welcomes strategic partners who can contribute one or more of the following:

- Healthcare provider relationships
- Multi-state operating experience

- Enterprise healthcare sales capabilities
- Technology architecture and product development expertise
- EVV, billing, payroll, or compliance knowledge
- Customer implementation and support infrastructure
- Industry association or channel relationships
- Strategic guidance and governance experience

Management believes that a qualified strategic partner may materially reduce the time, cost, and execution risk associated with entering additional markets.

4. COMPETITIVE LANDSCAPE

4.1 A Competitive but Fragmented Market

Healthcare providers often rely on multiple software systems to manage scheduling, billing, payroll, compliance, reporting, and workforce operations.

This fragmented approach increases administrative effort, creates duplicate data entry, and limits operational visibility.

True Care System is designed to address selected aspects of this fragmentation by bringing core workforce, visit, EVV, billing, payroll, compliance-related, reporting, and mobile workflows into a shared platform environment.

4.2 Competitive Position

True Care System competes by emphasizing:

- Product design informed by direct provider operating experience
- Integrated Web and mobile workflows
- Scheduling, visit management, and EVV within a shared environment
- Production Sandata integration pathway
- Multi-tenant provider architecture
- Role-based access and provider-level data isolation

- HIPAA-focused audit and access-history framework
- Support for billing, payroll, BSS, reporting, and administrative workflows
- Modular architecture intended for continued product expansion
- Direct founder involvement in product and customer implementation

Rather than competing solely on individual features, the Company intends to differentiate through practical workflow integration, founder-led implementation knowledge, responsive product development, and a platform designed around the operating needs of home- and community-based service providers.

The Company has not completed an independent competitive market study, and the healthcare software market includes established vendors with greater financial resources, larger customer bases, broader integration networks, and longer operating histories. True Care System's ability to compete will depend on product reliability, implementation quality, pricing, customer support, continued innovation, and successful market execution.

5. CUSTOMER VALUE PROPOSITION

Supporting More Coordinated Healthcare Operations: True Care System is designed to help healthcare providers reduce administrative complexity while improving visibility across daily operations. Actual outcomes will depend on customer implementation, data quality, staff adoption, workflow configuration, training, and continued management involvement.

Key customer benefits include:

- More centralized access to operational information
- Reduced duplicate data entry across supported workflows
- Improved visibility into scheduling and workforce activities
- Better coordination between office personnel and field employees
- Support for EVV, audit, and compliance-related processes
- More consistent access to operational and financial reports
- Support for billing review and payroll preparation

- Timelier access to visit, employee, and individual information
- Mobile workflow support for direct-care staff
- Improved management visibility through dashboards and reporting

By integrating selected functions within a shared platform, providers may be able to reduce administrative fragmentation and direct more management attention toward service quality, workforce support, and organizational growth.

6. GROWTH STRATEGY

6.1 Long-Term Commercial Growth

The Company's growth strategy is built around sustainable expansion rather than rapid customer acquisition.

Key strategic priorities include:

- Disciplined customer acquisition
- Continued product enhancement
- Reliable implementation and customer support
- Customer retention and account growth
- Expansion into selected healthcare markets
- Strategic healthcare and technology partnerships
- Repeatable onboarding and implementation processes
- Ongoing investment in security, infrastructure, and product quality
- Development of referral, channel, and provider-network relationships
- Careful adaptation to state-specific regulatory and EVV requirements

This approach is intended to support recurring revenue growth while allowing the Company to manage implementation quality, customer support demands, product development priorities, and the financial requirements of multi-state expansion.

6.2 Partnership-Led Growth

Management recognizes that the Company's growth may be accelerated through partnerships with healthcare operators, technology professionals, industry advisors, provider networks, and organizations with established customer relationships.

The founders are prepared to evaluate partnership structures based not only on financial investment, but also on the strategic value a partner can contribute through:

Strategic Contribution	Potential Value to True Care System
Provider Network Access	Shorter customer acquisition cycle and stronger market entry
Healthcare Operating Expertise	Improved product fit and implementation planning
Multi-State Experience	Better understanding of state-specific operating and regulatory requirements
Technology Expertise	Faster product enhancement, integration, security, and scalability
Enterprise Sales Capability	Stronger commercial pipeline and account development
Implementation Infrastructure	Increased capacity to onboard and support provider organizations
Industry Relationships	Greater access to associations, referral channels, and strategic alliances
Governance Experience	Stronger planning, accountability, and long-term organizational development

The founders' objective is to select partners whose participation can increase the probability and speed of sustainable commercial success, rather than evaluating potential partners solely on the amount of capital offered.

SECTION IV

SUMMARY

Healthcare providers continue to face administrative complexity, workforce challenges, documentation requirements, EVV obligations, billing demands, and the need for better operational visibility. These conditions create an opportunity for integrated healthcare technology platforms that can demonstrate reliability, practical workflow value, appropriate security controls, and responsive implementation support.

True Care System plans to begin broader commercialization with Pennsylvania providers in the Home Care, I/DD, Behavioral Health, residential, and community-based service sectors. This initial market focus is intended to allow the Company to refine onboarding, customer support, pricing, product configuration, and implementation procedures before entering additional states.

Future expansion will be pursued in phases and will depend on demonstrated customer demand, product readiness, regulatory requirements, financial resources, implementation capacity, and the availability of qualified strategic partners. The Company is particularly interested in partners who can contribute healthcare expertise, technology capabilities, commercialization experience, provider-network relationships, or multi-state operating knowledge in addition to financial capital.

By combining a recurring SaaS model with disciplined market entry, continued product development, and strategic collaboration, management intends to build a sustainable healthcare technology business serving provider organizations across multiple states.

SECTION V

BUSINESS PLAN & FINANCIAL PROJECTIONS

(2027–2031)

1. BUSINESS OBJECTIVES

1.1 Five-Year Strategic Objectives

True Care System's five-year objective is to establish a sustainable multi-state healthcare SaaS business serving Home Care, I/DD, Behavioral Health, and Community-Based service providers.

Over the next five years, the Company will focus on expanding its customer base, strengthening its technology platform, developing strategic partnerships, and building an organization capable of supporting recurring revenue growth across multiple states.

1.2 Strategic Priorities

- Build an initial provider customer base in Pennsylvania
- Refine onboarding, implementation, training, and support processes
- Enter selected additional states based on demonstrated demand and regulatory readiness
- Continue product, security, and infrastructure development
- Develop strategic healthcare and technology partnerships
- Build repeatable sales and customer-acquisition processes
- Target customer satisfaction and retention above 95%
- Pursue sustainable recurring subscription revenue growth

2. FIVE-YEAR GROWTH PLAN

2.1 Provider Growth Projection

The following growth plan represents management's current planning assumptions rather than guaranteed results. Actual provider and Individual growth will depend on capital

availability, customer acquisition, implementation capacity, strategic partnerships, product readiness, regulatory requirements, and market conditions.

Year	Providers	Year-over-Year Growth
2027	22	—
2028	34	55%
2029	50	47%
2030	68	36%
2031	90	32%

Provider counts represent active subscribing provider organizations projected at year-end.

2.2 Average Active Individuals per Provider

Average active Individuals per provider are planning assumptions based on the Company's intended customer profile and may vary materially by provider size, service model, location, and implementation scope.

Year	Average Individuals
2027	260
2028	290
2029	320
2030	350
2031	380

2.3 Total Active Individuals

Year	Individuals
2027	5,720
2028	9,860
2029	16,000
2030	23,800
2031	34,200

Total active Individuals are calculated by multiplying projected active providers by the projected average active Individuals per provider for each year.

3. PRICING STRATEGY

True Care System intends to generate recurring revenue through a Software-as-a-Service subscription model based primarily on the number of active Individuals managed within the platform.

Management has established an initial reference price of approximately **\$30 per active Individual per month**. To reduce the financial and operational barriers associated with adopting a new healthcare management platform, the founders propose an introductory commercialization program consisting of:

- A **three-month trial period** for qualified provider organizations;
- An introductory subscription fee of **\$25 per active Individual per month** following the trial period; and
- An assumed annual price adjustment of approximately **5%** during the five-year planning period.

The trial period is intended to give participating providers an opportunity to evaluate the platform, train staff, configure workflows, and assess its practical value before beginning regular subscription payments. The introductory pricing is intended to support early customer adoption, build reference accounts, collect structured product feedback, and strengthen long-term customer relationships.

Introductory Subscription Pricing

Year	Monthly Fee per Active Individual	Pricing Position
2027	\$25.00	Introductory commercial rate
2028	\$26.25	Gradual annual adjustment
2029	\$27.56	Gradual annual adjustment
2030	\$28.94	Approaching standard reference price
2031	\$30.39	Approximate normalized market rate

The pricing projection assumes an average annual adjustment of approximately 5%. Actual pricing may vary based on product scope, provider size, implementation requirements, contract terms, competitive conditions, inflation, customer support requirements, and additional functionality.

The three-month trial and introductory subscription rate are intended as initial customer-acquisition and marketing strategies. Eligibility, trial scope, onboarding support, data preparation requirements, and conversion terms will be defined through the applicable customer agreement.

Management may also introduce minimum monthly fees, implementation charges, training services, premium modules, integration services, or enterprise pricing in future periods. These potential revenue sources are not included in the core subscription projections presented below unless otherwise stated.

Pricing Governance

The pricing structure presented in this memorandum reflects the founders' current preliminary commercialization strategy. It is not intended to restrict future management decisions or establish a permanent pricing policy.

Following the admission of a strategic investor or partner, pricing, trial programs, discounts, contract terms, and customer-acquisition policies will be reviewed

collaboratively based on market conditions, customer feedback, competitive positioning, financial objectives, and the long-term interests of True Care System.

The founders are committed to maintaining a practical and collaborative approach. They are prepared to revise the proposed pricing model and related commercial policies when a different strategy is reasonably expected to improve customer adoption, recurring revenue, market expansion, or the long-term value of the Company.

4. FIVE-YEAR REVENUE PROJECTION

Annualized Subscription Revenue Projection

Year	Individuals	Monthly Fee	Annual Revenue
2027	5,720	\$25.00	\$1,716,000
2028	9,860	\$26.25	\$3,105,900
2029	16,000	\$27.56	\$5,291,520
2030	23,800	\$28.94	\$8,265,264
2031	34,200	\$30.39	\$12,472,056
Five-Year Cumulative Projected Revenue: Approximately \$30.9 Million			

Revenue Projection Note: The figures above represent an annualized subscription revenue model based on the projected active Individual counts and stated monthly fees. Actual recognized revenue may be lower, particularly during the initial commercialization period, because qualified providers may receive a three-month trial, customers may be onboarded at different times throughout the year, and active Individual counts may fluctuate. Accordingly, these projections are intended for business-planning purposes and should not be interpreted as guaranteed cash-revenue results.

5. CUSTOMER ACQUISITION PLAN

5.1 Net Provider Additions

Year	New Providers
2027	22
2028	12
2029	16
2030	18
2031	22

Net provider additions represent new provider customers after considering potential customer attrition.

5.2 Customer Acquisition Channels

The Company intends to acquire customers through a combination of direct, referral, partnership, and industry-based channels, including:

- Direct sales
- Referral programs
- Strategic partnerships
- Healthcare conferences
- Digital marketing
- Industry associations
- Founder and provider relationships
- Channel and implementation partners
- Demonstration and pilot engagements

Customer acquisition priorities and spending will be adjusted based on channel performance, customer acquisition cost, implementation capacity, sales-cycle length, and customer retention.

5.3 Strategic Partner Contribution

Strategic partners may support customer acquisition by introducing the Company to provider networks, healthcare associations, enterprise customers, implementation organizations, technology partners, and state-specific industry relationships.

Management will evaluate strategic partners based on the quality and relevance of their market access, healthcare expertise, commercialization capabilities, and ability to support sustainable customer adoption—not solely on the amount of capital invested.

6. HIRING PLAN

Planned Year-End Operating Team

Department	2027	2028	2029	2030	2031
Engineering	2	4	4	5	5
Sales & Marketing	2	3	4	5	6
Customer Success & Technical Support	1	2	3	4	5
Administration & Operations	1	2	2	3	3
Total Employees	6	11	13	17	19

The table reflects planned year-end operating headcount and excludes the three founders unless otherwise stated.

Hiring will be phased according to customer growth, implementation demand, available capital, partner capabilities, and operating performance. Certain functions may initially be supported by founders, contractors, or strategic partners before conversion to full-time positions.

7. PRODUCT DEVELOPMENT ROADMAP

Planned Product Expansion

2027

- AI-assisted scheduling evaluation and development
- Enhanced reporting
- Customer self-service portal

2028

- Expanded payroll automation
- Advanced operational analytics
- Configurable workflow automation

2029

- AI-assisted documentation capabilities
- Predictive staffing analysis
- AI-supported executive insights

2030

- Multi-state compliance configuration framework
- Enterprise API and integration framework
- Selected third-party integrations

2031

- Expanded AI-enabled operational capabilities
- Broader multi-state commercialization
- Enterprise-scale customer support capabilities

8. KEY PERFORMANCE INDICATORS (KPIs)

The Company will monitor the following performance indicators:

KPI	2027 Planning Target
Active Providers	22
Active Individuals	5,720
Annualized Subscription Revenue	Approximately \$1.7M
Customer Retention	95% or higher
System Availability	99.5% or higher
Customer Satisfaction	90% or higher
Standard Implementation Time	30–60 Days
Customer Support Response	Defined service-level targets
Gross Revenue Retention	To be monitored after commercial launch

9. BUSINESS PLAN SUMMARY

Over the 2027–2031 planning period, True Care System intends to pursue a phased commercialization strategy focused on provider adoption, recurring subscription revenue, product quality, implementation capacity, customer support, and controlled multi-state expansion.

The business plan assumes growth from 22 active provider organizations and approximately 5,720 active Individuals in 2027 to 90 providers and approximately 34,200 active Individuals by 2031. Pricing begins at \$25 per active Individual per month in 2027, with an assumed annual adjustment of approximately 5%. Based on these assumptions, annualized subscription revenue could increase from approximately \$1.7 million in 2027 to approximately \$12.5 million by 2031.

These figures are management planning projections rather than guaranteed results. Actual performance will depend on provider acquisition, onboarding timing, customer retention, implementation capacity, regulatory readiness, product performance, available capital, competitive conditions, and the contribution of strategic partners.

Management believes the most valuable investor relationship will combine financial resources with healthcare expertise, technology capabilities, provider-network access,

commercialization experience, or implementation infrastructure. Such a partnership may help True Care System enter additional states more efficiently and build a stronger long-term healthcare technology business.

SECTION VI

FINANCIAL PLAN

1. FINANCIAL ASSUMPTIONS

The financial projections presented in this memorandum are based on management's current operating assumptions and are intended solely for planning purposes.

These projections are not guarantees of future performance. Actual results may vary materially based on customer acquisition timing, trial periods, onboarding schedules, active Individual volumes, pricing decisions, customer retention, hiring, infrastructure requirements, market conditions, available capital, and strategic partner contributions.

Key Assumptions

Assumption	Planning Basis
Standard Reference Price	Approximately \$30 per Active Individual per Month
Introductory Subscription Fee (2027)	\$25 per Active Individual per Month
Initial Trial Program	Up to 3 Months for Qualified Providers
Annual Price Adjustment	Approximately 5%
Customer Retention Target	95% or Higher
Gross Margin Planning Target	80%
General Inflation Assumption	3%
Corporate Income Taxes	Excluded from Projections
Projection Period	2027–2031

The introductory trial and pricing programs reflect the founders' current preliminary commercialization strategy and may be revised collaboratively following the admission of a strategic investor or partner.

2. FIVE-YEAR ANNUALIZED REVENUE FORECAST

Year	Annualized Subscription Revenue
2027	\$1,716,000
2028	\$3,105,900
2029	\$5,291,520
2030	\$8,265,264
2031	\$12,472,056

The revenue forecast is derived from the projected active Individual counts and monthly subscription fees presented in Section V. Because providers may receive an introductory trial and may begin service at different times during the year, actual recognized revenue may be lower than the annualized figures shown above.

3. COST OF REVENUE

Primary costs associated with delivering the SaaS platform may include cloud hosting and data services, customer onboarding, implementation support, technical support, third-party software licensing, payment processing, data storage, monitoring, and other costs that vary with customer and platform usage.

Year	Cost of Revenue	Gross Margin Target
2027	\$343,200	80%
2028	\$621,180	80%
2029	\$1,058,304	80%
2030	\$1,653,053	80%

Year	Cost of Revenue	Gross Margin Target
2031	\$2,494,411	80%

The 80% gross margin is a planning target rather than a guaranteed result. Actual margins may vary based on infrastructure usage, implementation intensity, support requirements, third-party fees, pricing, and customer scale.

4. GROSS PROFIT

Year	Gross Profit
2027	\$1,372,800
2028	\$2,484,720
2029	\$4,233,216
2030	\$6,612,211
2031	\$9,977,645

5. OPERATING EXPENSE BUDGET

The following operating expense budget represents management's current estimate of the organizational resources required to support the growth plan. Actual spending will be phased according to customer growth, available capital, implementation demand, hiring decisions, partner capabilities, and operating performance.

CATEGORY	2027	2028	2029	2030	2031
Payroll	\$650,000	\$1,050,000	\$1,550,000	\$2,050,000	\$2,650,000
Sales & Marketing	\$120,000	\$250,000	\$420,000	\$620,000	\$900,000

CATEGORY	2027	2028	2029	2030	2031
Platform Infrastructure & Internal Technology	\$60,000	\$90,000	\$140,000	\$200,000	\$280,000
Office & Administration	\$75,000	\$90,000	\$105,000	\$120,000	\$135,000
Insurance & Legal	\$40,000	\$45,000	\$55,000	\$65,000	\$75,000
Accounting & Professional Services	\$35,000	\$45,000	\$55,000	\$65,000	\$80,000
Research & Development	\$100,000	\$150,000	\$220,000	\$320,000	\$450,000
Miscellaneous	\$20,000	\$25,000	\$30,000	\$40,000	\$50,000
Total Operating Expenses	\$1,100,000	\$1,745,000	\$2,575,000	\$3,480,000	\$4,620,000

Payroll assumptions should be reviewed together with the hiring plan in Section V. Certain functions may initially be performed by founders, contractors, or strategic partners, which may change both payroll timing and total operating expenses.

6. EBITDA PROJECTION

Year	Gross Profit	Operating Expenses	Projected EBITDA
2027	\$1,372,800	\$1,100,000	\$272,800
2028	\$2,484,720	\$1,745,000	\$739,720
2029	\$4,233,216	\$2,575,000	\$1,658,216
2030	\$6,612,211	\$3,480,000	\$3,132,211
2031	\$9,977,645	\$4,620,000	\$5,357,645

EBITDA is presented as a planning measure before interest, taxes, depreciation, and amortization. It does not represent net income or available cash and may be materially affected by actual revenue recognition, hiring, customer acquisition costs, implementation requirements, and future investment decisions.

7. EBITDA MARGIN

Year	Projected EBITDA Margin
2027	15.9%
2028	23.8%
2029	31.3%
2030	37.9%
2031	43.0%

The projected margin expansion assumes that recurring revenue grows faster than fixed operating expenses. Actual margins may differ substantially if customer acquisition, implementation, staffing, infrastructure, or regulatory costs exceed current assumptions.

8. CASH FLOW PROJECTION

Year	Indicative Operating Cash Flow
2027	Approximately \$250,000
2028	Approximately \$700,000
2029	Approximately \$1,600,000
2030	Approximately \$3,000,000
2031	Approximately \$5,200,000

The indicative operating cash flow outlook is based on management's preliminary assumptions regarding revenue collection, operating expenses, working capital, and

customer growth. It does not represent a detailed statement of cash flows and excludes potential financing transactions, capital expenditures, taxes, debt service, changes in accounts receivable, and other timing differences.

A more detailed cash flow model should be prepared with the Company's financial and strategic partners before final investment decisions are made.

9. BREAK-EVEN ANALYSIS

Based on the current 2027 cost structure and an assumed gross margin of 80%, management estimates that the Company would require approximately \$1.38 million in annualized subscription revenue to cover projected operating expenses before interest, taxes, depreciation, and amortization.

The break-even estimate does not account for free-trial periods, customer onboarding timing, taxes, capital expenditures, financing costs, or changes in working capital. Actual break-even timing may therefore differ from this planning estimate.

Metric	Estimated Value
Annual Operating Expense Base	Approximately \$1.10 Million
Gross Margin Assumption	80%
Annual Break-Even Revenue	Approximately \$1.38 Million
Monthly Break-Even Revenue	Approximately \$115,000
Paying Active Individuals at \$25/Month	Approximately 4,600
Equivalent Providers at 260 Individuals Each	Approximately 18

10. FINANCIAL HIGHLIGHTS

Metric	Planning Value
Five-Year Annualized Subscription Revenue	Approximately \$30.9 million
2031 Annualized Subscription Revenue	Approximately \$12.47 million

Metric	Planning Value
Gross Margin Planning Target	80%
Projected EBITDA (2031)	Approximately \$5.36 million
Projected EBITDA Margin (2031)	Approximately 43.0%
Customer Retention Target	95% or higher
Estimated Annual Break-Even Revenue	Approximately \$1.38 million
Estimated Break-Even Active Individuals	Approximately 4,600

SECTION VII

INVESTMENT OPPORTUNITY

1. INVESTMENT OPPORTUNITY

1.1 Accelerating the Next Phase of Growth

Following approximately 34 months of founder-funded product development, operational validation, and commercialization preparation, True Care System has established a production-ready healthcare SaaS platform with core Web, mobile, workforce, EVV, billing, reporting, security, and administrative capabilities.

The Company's next phase is focused on customer acquisition, implementation capacity, continued product enhancement, organizational development, strategic partnerships, and disciplined multi-state expansion.

To support this transition, True Care System is seeking strategic investment and long-term partnership from individuals or organizations that share the Company's objective of improving healthcare-provider operations through practical and responsible technology.

The founders are particularly interested in partners who can contribute healthcare industry experience, provider relationships, technology capabilities, commercialization knowledge, implementation resources, enterprise sales experience, or multi-state operating expertise in addition to financial capital.

1.2 Strategic Partnership Approach

True Care System is not seeking capital solely to complete an undeveloped software concept. The founders have already invested substantial professional time and direct expenses to establish the Company's core technology and prepare it for broader commercialization.

The purpose of the proposed investment is to combine this existing foundation with the financial resources, experience, relationships, and capabilities required to accelerate customer adoption and expand into additional healthcare markets.

The founders' initial transaction framework contemplates making available up to **49% of the Company's ownership** for a qualified investment and strategic partnership. This percentage is intended as a starting framework for discussion rather than a fixed or automatic offer.

The founders expect to remain actively involved in the Company's leadership, product direction, healthcare workflow development, and long-term strategy. Their objective is to establish a balanced ownership and governance structure that supports accountability, collaboration, and sustainable value creation.

Where a prospective partner can provide exceptional strategic value—such as established healthcare-provider networks, multi-state operating capabilities, advanced technology resources, enterprise commercialization infrastructure, or significant industry relationships—the founders are prepared to consider alternative ownership structures, including a position in which their combined ownership may be below 50%, when they reasonably believe that such a partnership offers a stronger long-term path for True Care System.

1.3 Investment Objectives

Capital and strategic resources contributed through the proposed partnership are expected to support the following priorities:

- Product development and security enhancement
- Sales and provider acquisition
- Marketing and brand development
- Customer onboarding and implementation
- Customer success and technical support
- Cloud infrastructure and operational scalability
- Multi-state regulatory and integration readiness
- Working capital and organizational development

The Company's objective is to build recurring subscription revenue through disciplined customer acquisition, reliable implementation, responsive support, continued product development, and responsible financial management.

2. USE OF FUNDS

2.1 Preliminary Allocation Framework

Management's preliminary allocation framework is presented below. Actual allocations will depend on the amount and form of investment, customer growth, implementation demand, strategic partner capabilities, market conditions, and the priorities jointly approved following the transaction.

Category	Preliminary Allocation
Product, Engineering & Security	25%
Sales & Provider Acquisition	20%
Marketing & Brand Development	20%
Customer Implementation, Success & Support	15%
Cloud Infrastructure & Operational Scalability	10%
Working Capital & Organizational Development	10%
Total	100%

This framework is intended to balance product quality, commercial growth, implementation capacity, customer support, infrastructure, and organizational stability. Management and future strategic partners may revise the allocation when a different use of resources is expected to produce stronger long-term results.

2.2 Strategic Contributions Beyond Capital

In addition to financial investment, a strategic partner may contribute resources that reduce the Company's direct cash requirements or accelerate execution.

Potential Partner Contribution	Expected Business Benefit
Healthcare Provider Network	Faster access to qualified prospective customers
Sales and Distribution Infrastructure	Shorter commercialization cycle
Technology and Engineering Resources	Faster product development, integration, and security enhancement
Implementation Personnel	Greater onboarding and customer-support capacity
Multi-State Operating Experience	Better preparation for state-specific requirements
Industry and Association Relationships	Increased visibility, referrals, and partnership opportunities
Governance and Financial Experience	Stronger planning, controls, and organizational accountability

Such non-cash contributions will be evaluated as part of the overall strategic value of a proposed partnership and may influence the final investment, ownership, and governance structure.

3. EXPECTED BUSINESS MILESTONES

The Company has established the following strategic milestones for the next five years.

Year	Planning Milestone
2027	Establish initial Pennsylvania provider base; refine onboarding, support, pricing, and customer implementation
2028	Begin selected multi-state expansion based on demand, regulatory readiness, and partner capabilities
2029	Develop broader provider, referral, channel, and strategic partner relationships

Year	Planning Milestone
2030	Expand recurring subscription revenue and strengthen implementation and customer-support capacity
2031	Operate as a broader multi-state healthcare SaaS platform with a path toward sustained profitability

These milestones are management planning objectives rather than guaranteed outcomes. Timing and execution may be adjusted based on customer demand, available capital, regulatory requirements, product readiness, implementation capacity, strategic partner contributions, and competitive conditions.

4. RISK MANAGEMENT

As True Care System continues to grow, management recognizes that every expanding healthcare technology company faces operational, commercial, regulatory, and market risks. The Company is committed to proactively identifying, monitoring, and managing these risks through sound operational practices, continuous product improvement, cybersecurity, financial discipline, and effective corporate governance.

Risk Area	Management Response
Market Adoption	Continue strengthening provider onboarding, customer success, and strategic partnerships.
Regulatory Environment	Continuously monitor regulatory changes and update the platform as required.
Technology & Cybersecurity	Continue investing in platform reliability, cybersecurity, and infrastructure.
Competition	Maintain product innovation and high-quality customer support.
Commercial Execution	Strengthen sales, implementation, and customer success capabilities.
Business Growth	Scale operations through disciplined organizational development and strategic partnerships.

Management believes that effective risk management is an ongoing process and remains committed to continuously strengthening the Company's operational excellence, cybersecurity, financial management, and corporate governance as the business grows.

5. POTENTIAL LONG-TERM STRATEGIC OUTCOMES

If the Company successfully executes its long-term strategy, multiple potential pathways may become available for creating and realizing shareholder value.

Potential strategic outcomes may include:

- Long-term independent operation supported by recurring subscription revenue
- Strategic partnership or joint-venture expansion
- Strategic merger with a complementary healthcare or technology organization
- Minority or majority investment by a healthcare-focused or technology-focused investor
- Acquisition by a healthcare technology, workforce-management, EVV, payroll, or related software company
- Investment or acquisition by a private equity or growth-capital organization

The Company is not currently committed to any specific liquidity or exit strategy. Management's primary focus is to build a sustainable healthcare technology business, strengthen recurring revenue, serve customers effectively, and preserve strategic flexibility for shareholders.

6. INVESTMENT PROCESS AND NEXT STEPS

6.1 Preliminary Nature of Discussions

The ownership percentage, investment amount, valuation, governance rights, use of funds, strategic contributions, and transaction structure described in this memorandum are preliminary and subject to further discussion, due diligence, negotiation, legal documentation, and final approval by the founders and prospective partner.

6.2 Strategic Fit Review

In evaluating a potential partner, the founders expect to consider:

- Financial capacity and proposed investment
- Healthcare-industry knowledge
- Provider and market relationships
- Technology and commercialization capabilities
- Multi-state experience
- Governance approach
- Long-term commitment
- Alignment with the Company's mission and values
- Ability to collaborate with the existing founder team

6.3 Due Diligence and Definitive Agreements

Interested parties may request additional financial, technical, operational, legal, ownership, product, security, and commercialization information subject to appropriate confidentiality protections.

No investment or ownership transfer will occur unless and until the parties complete satisfactory due diligence and execute mutually acceptable definitive agreements.

SECTION VII – SUMMARY

True Care System is seeking a strategic partnership that combines capital with capabilities that can accelerate responsible commercial growth. The founders have established an initial framework involving up to 49% ownership but remain flexible when a prospective partner can contribute exceptional long-term value through healthcare relationships, technology resources, commercialization infrastructure, multi-state experience, or other strategic capabilities.

The founders expect to remain actively involved in the Company's leadership and development. Their priority is not simply to preserve the highest possible ownership percentage, but to establish the partnership and governance structure most likely to support True Care System's long-term success.

All proposed terms remain preliminary and subject to due diligence, negotiation, and definitive agreements.

Appendix A

Executive Leadership Team

- Founder & CEO Biography

Dr. Van Duong Chau (Founder & Chief Executive Officer)

Dr. Van Duong Chau is the Founder and Chief Executive Officer of True Care System, LLC. He holds a **Doctorate in Educational Management** and has more than **20 years of leadership experience** in education management, organizational development, and healthcare operations. He is also the CEO of **Blue Angels Care, LLC** in Pennsylvania. Dr. Chau leads the Company's corporate strategy, product vision, technology roadmap, and long-term business development.

- Co-Founder & COO Biography

Thi Thuy Hang Tran, MHA (Co-Founder & Chief Operating Officer)

Thi Thuy Hang Tran serves as Co-Founder and Chief Operating Officer of True Care System. She holds a **Master's Degree in Healthcare Administration** and has more than **18 years of experience** in education management and healthcare operations. She oversees operational management, customer implementation, workflow optimization, and organizational development while ensuring the platform reflects the practical needs of healthcare providers.

- Project Director Biography

Tu Chau (Co-Founder & Project Director)

Tu Chau serves as Project Director and is a Bachelor of Healthcare Administration candidate. He is responsible for project coordination, implementation planning, quality assurance, product testing, and release management. His contributions have been instrumental in transforming product concepts into a production-ready healthcare SaaS platform while supporting continuous product improvement and customer implementation.

Appendix B

Product Portfolio

This appendix provides a high-level overview of the True Care System platform, including representative product screenshots and a summary of the major functional modules. The materials are intended to illustrate the maturity, breadth, and usability of the current product.

- Platform Overview

- Product Screenshots

Mobile App

Visit Recorded

Billing

Payroll

HIPAA

Reports Center

- Module Summary

Category	Modules
Administration	User, Role, Provider
Clinical	Individual, Medication, BSS
Workforce	Employee, Scheduling, EVV
Financial	Billing, Payroll
Compliance	HIPAA, Audit
Mobile	iOS, Android

Appendix C

Technology Overview

This appendix summarizes the underlying technology architecture used to develop, secure, deploy, and operate the True Care System platform.

Figure 1. High-level architecture of the True Care System platform, demonstrating the integration of Web Portal, Mobile Application, cloud infrastructure, PostgreSQL, and Sandata Open EVV within a secure, scalable, and HIPAA-compliant SaaS environment.

Figure 2. High-level cloud infrastructure architecture illustrating how True Care System leverages a modern, scalable, and secure cloud platform to support multi-provider SaaS operations, HIPAA compliance, high availability, and Sandata Open EVV integration.

Figure 3. Security framework overview demonstrating the core security controls implemented by True Care System, including authentication, role-based access control, encryption, HIPAA audit logging, automated backup, and continuous security monitoring to protect sensitive healthcare information.

For partners interested in conducting a more detailed technical review, comprehensive product, architecture, API, implementation, HIPAA, and operational documentation is available through the True Care System Documentation Portal under the *Documentation Support* section of our website, or directly at:

SELECT YOUR VENDOR ORGANIZATION *

True Care System

ENTER THE EMAIL ADDRESS YOU USE AT YOUR ORGANIZATION *

☐ My organization is not listed

Continue Registration

Welcome! Please be advised, in order to register to be an Alternate (Alt) EVV vendor in a state program and go through Alt EVV vendor certification, the following must be in place:

- 1) Your vendor organization must be known to Sandata, or in other words be in the drop-down above. If you do not see your name in the drop-down, please contact [Sandata Support](#) to get your organization added.
- 2) You must be listed as a user for your vendor organization with Sandata and have set up credentials in Sandata on Demand (SoD). If you have not completed this, please reach out to [Sandata Support](#) and request to be added as a user to your organization.
- 3) At least one provider in the state must have listed your organization as their Alt EVV vendor of choice, in their provider registration with Sandata.

Figure 1: True Care System is officially listed as a registered EVV Vendor Organization within the Sandata platform, supporting certified EVV integration for participating healthcare providers.

Figure 2. True Care System successfully achieved Sandata Production Certification ("Certified in Prod"), confirming that the platform has met Sandata's production integration requirements and is authorized to exchange EVV data with the Sandata Production environment.

Figure 4. End-to-end operational workflow illustrating the complete care delivery lifecycle supported by the True Care System platform, from Individual intake through scheduling, EVV, billing, payroll, and operational reporting.

CLOSING STATEMENT

The founders of True Care System are seeking more than financial investment. We are looking for strategic partners who share our long-term vision of building one of the leading healthcare technology platforms serving providers across multiple U.S. states.

We highly value partners who can contribute industry expertise, healthcare networks, operational experience, technology innovation, or strategic guidance. The founders believe that the right partnership can create significantly greater long-term value than capital alone, and therefore remain open to structuring a mutually beneficial partnership that aligns with the shared vision for True Care System.

We are committed to building a trusted, scalable, and sustainable healthcare technology company that delivers meaningful value to providers, caregivers, and the communities they serve.

Confidentiality Notice

This Investment Memorandum contains confidential and proprietary information of **True Care System, LLC**. It is provided solely for the purpose of evaluating a potential investment or strategic partnership.
