OUR APPROACH

Investing with Purpose

A dedicated approach that puts clients first.

1

Start Smart

First, we gain a thorough understanding of your current financial situation, goals and objectives, and the key considerations that should be addressed when developing your strategic plan.

2

Apply Discipline

Next, we design an investment strategy that actively works to optimize your wealth and protect your finances, keeping your goals and objectives at the forefront of our planning process.

3

Communicate Progress

Lastly and continually, we work to ensure transparency of your investment plan by providing visibility, proactive outreach, and accessibility to our team throughout our working relationship.

START SMART
Current Household Sentiment

We've identified six universal considerations that can impact one's ability to achieve their short- and long-term financial goals. The key to understanding these considerations is not if they will impact your household, but to what degree. A key principle to follow is to protect the income that you **need** so that you may optimize the income for things that you **want**.

Consideration

Sentiment

Longevity

Outliving financial assets as the result of a longer life.

Liquidity

Limited access to assets to meet life's unexpected financial needs.

Inflation

Reduction in real purchasing power as the result of increasing cost of living.

Market

Unexpected reduction in the value of financial assets at the time of withdrawal.

Mortality

Loss of financial assets as the result of a partner's or spouse's death.

Taxes

Decreased income and assets and/or the impairment of legacy assets from increasing taxes.

START SMART

Value at Risk (VaR) Analysis & Scoring

The VaR (Value at Risk) Analysis attempts to quantify your sentiment regarding financial uncertainty, specifically your emotional tolerance with respect to the magnitude and speed of potential investment loss ("Household VaR Score") and establishes the basis for selecting investment and income strategies with commensurate risk-reward profiles ("Model Portfolio VaR Score").

The Model Portfolio VaR Score estimates potential loss with a 95% probability during normal market conditions, within a set time period, and is calculated by measuring your portfolio's historic volatility. The Household VaR Score attempts to mitigate the effects of financial biases and gauge your tolerance for potential loss over 3-month, 6-month, and 12-month time horizons. This analysis outlines the potential loss outcome, giving us an understanding as to whether or not a guaranteed income strategy is recommended to help reduce your current portfolio's exposure to risk and reflect your sentiment to market risk. Both the Household VaR Score and the Portfolio VaR Score are indexed on a scale from Conservative to Aggressive.

Proposed Portfolio Allocation

52

\$1,274,750

HOLDING	% OF PORTFOLIO
Domestic Equity	39.87%
Domestic Fixed Income	22.31%
International Equity	18.99%
Emerging Markets Equity	8.07%
Annuity	5.07%
Money Market	1.90%
Alternative	1.90%
International Fixed Income	1.90%

Proposed Strategy Considerations

- Generates growth and income, while actively managing risk
- Align with communicated investment goals and objectives
- Risk management that aligns with the client investor profile.
- Extensively diversified across traditional and specialized investment types including stocks, bonds, foreign investments, hard assets, and hybrid securities

COMMUNICATE PROGRESS A.C.T.

We A.C.T. to communicate progress on your portfolio.

A

Accessible

We understand the importance of being available to you when questions or concerns arise. We will return your phone call or email within 1-2 business days and if the issue is still not resolved, we will schedule a meeting with you at the earliest time possible.

C

Consistent

Together we will determine your communication preferences and frequency so that we can be sure to communicate progress on your investments, schedule reviews, as well as provide you with critical market updates throughout the year.

T

Transparent

You will have a secured login to your client portal that will allow you to view your entire financial landscape in one location on any online device. Through this portal you will be able to view your accounts and access financial tools, performance reports, balance sheets, key documents and more.

AssetLock Portfolio Monitoring Hypothetical Example

AssetLock is a secured, investment portfolio monitoring and communication service that is provided to our clients at no cost.

AssetLock will work to keep you informed about the progression of your portfolio in accordance with your household's Value at Risk (VaR) Score and model portfolio allocation, by providing personalized email and/or text communications when important portfolio benchmarks have been achieved. Once your investment strategy is implemented, you will begin to receive weekly portfolio summaries and notifications when your portfolio reaches a new high, or in the event your portfolio value dips below your risk threshold, in which case you may elect to discuss possible changes to your investment strategy.

Key Definitions

AssetLock Threshold The investor-driven acceptable range of downside loss as determined by the household and portfolio Value at Risk (VaR) Scores.	AssetLock Value Portfolio value at which AssetLock will alert the investor and advisor. This value is based off the High-Water Value less the AssetLock Threshold.	Portfolio Value Daily portfolio value based on data at the close of the Stock Market the previous business day.	High-Water Value Highest value the portfolio has reached. This value increases as a portfolio grows and will not decrease with market loss.
--	--	---	---

This hypothetical example demonstrates using AssetLock on an initial account valued at \$100,000. The investor's household Value at Risk (VaR) Analysis and model portfolio allocation determined a 10% AssetLock Threshold desired in the portfolio making the starting AssetLock Value \$90,000. If the portfolio experiences growth to a High-Water Value of \$146,793, the AssetLock Value would then increase to \$132,114. If the portfolio then experiences a 10% loss, breaching the AssetLock Value of \$132,114, the financial advisor and investor will be notified to discuss the possibility of portfolio allocation adjustments.

Unless otherwise specified, all return figures shown above are for illustrative purposes only and are not actual customer or model returns. Actual returns will vary greatly and depend on personal allocation and market circumstances. Please see the Appendix for AssetLock® Disclaimers.

COMMUNICATE PROGRESS

AssetLock® Figures

AssetLock monitors the client-agreed-upon investment strategy at the account level and communicates key benchmarks at the household (combined investment and/or investment and insurance accounts) level.

If an annuity is part of your household financial strategy, an in-force illustration of the annuity must be provided to Simplicity Wealth for AssetLock to track household strategy.

If new accounts are added to the household portfolio, the AssetLock Threshold and Value will modify based on the new portfolio's VaR Score. AssetLock figures will automatically adjust after the account is funded and will be reflected in the following week's portfolio summary communication.

- Extensively diversified across traditional and specialized investment types including stocks, bonds, foreign investments, hard assets, and hybrid securities

Appendix

HYPOTHETICAL Investment Figures Notice

This document can help you understand the types of hypothetical performance that may be provided by your financial advisor. It also helps explain the impact of fees and how the selection of indexes can affect the performance presentation you receive. Hypothetical performance represents results that were not actually achieved by a portfolio under the management or advisement of your financial advisor, Simplicity Wealth, model provider or third-party asset manager. Hypothetical returns are theoretical and do not reflect actual client results. Hypothetical performance carries a unique set of risks and limitations that you should understand.

There are three occurrences in which hypothetical data is included:

1. Your current positions' historical performance
2. Benchmarks with fees deducted from performance
3. Blended models as part of your proposed investments

CURRENT POSITIONS HISTORICAL PERFORMANCE

In your proposal, current portfolio positions are calculated to determine how they would have performed in the past 10 years if available. This would assume the investor held all of the positions for that time period with no changes. Such results do not represent the impact that material economic and market factors might have on an investment adviser's decision-making process if the adviser were actually managing client money. There is potential that investments that performed well historically may not be the same for the future. Past performance does not guarantee future results. The methodology is meant to provide a snapshot of how the portfolio would have performed but should not be construed as actual performance. The proposed investments only utilize actual performance data and can be relied upon.

BENCHMARKS

Benchmarks, represented by indexes, are reference points used to compare the results of a portfolio over time. Benchmarks are available for most asset classes, market types, and investment characteristics. The index chosen to compare a portfolio can make investment returns appear more or less favorable. Benchmarks are provided for illustration and comparison purposes only. It is not possible to invest directly in an index. Indexes are unmanaged and do not incur management fees, costs, or expenses. Simplicity Wealth proposals deduct the proposed advisory fees from the benchmark. Index performance assumes the reinvestment of dividends. In no way should the performance of an index be considered indicative of, or a guarantee of, future performance. Nor should it be considered indicative of the actual performance achieved by a holding or a portfolio or be considered a substitute for an actual holding in a portfolio.

BLENDED MODELS

You may receive an investment recommendation that includes a blend of two or more models. While actual performance data is utilized for historical performance based on the recommended weighting on the proposed investment, this is still considered hypothetical performance. The reason is that this model weighting and selection is specific to you. There is no investment history despite the fact that each individual model has historical data. Each individual model in the proposal has a page dedicated to actual performance up to 10 years.

SUMMARY

Simplicity Wealth encourages you to consult your financial advisor and ask questions regarding the assumptions and data utilized within your proposal.

Questions you may want to ask your financial advisor:

- What type of performance are you showing me, actual or hypothetical?
- Is actual performance available?
- What are the assumptions or limitations of hypothetical performance?
- What benchmark are you using to compare returns?
- How did you select the benchmark and what does it represent?
- How might returns compare against another benchmark?

PROPOSED INVESTMENTS

Household Analysis

Risk-Reward (Chart Return Period: 07-2021 - 06-2026)

Growth of 1,000 (Chart Return Period: 07-2021 - 06-2026)

The hypothetical performance analysis is based on the Advisor's recommended asset allocations and model portfolios ("Blended Models"). Hypothetical results have limitations and do not reflect actual trading or economic impacts. Past performance is no guarantee of future results. The portfolio will be measured against a benchmark representative of a similar risk profile. Your investment may not achieve similar results to this benchmark. Please see the additional important information regarding hypothetical performance located in the Disclosures section of this presentation.

DISCLOSURE

Important Disclosures

Registration with the SEC or the state does not constitute an endorsement of the firm by the SEC nor does it indicate that the adviser has attained a particular level of skill or ability. Although the information in this report has been compiled from data considered to be reliable, the information is unaudited and is not independently verified. Simplicity Wealth does not guarantee that the foregoing material is accurate, complete, or up to date. The Results do not represent actual results. Be sure to consult with a qualified financial advisor and/or tax professional before implementing any strategies discussed in this document. Investing involves risk, including the risk of losing your entire principal investment. No investment strategy, such as asset allocation or diversification, can guarantee a profit or protect against loss in any given market environment. Please note that rebalancing investments may cause investors to incur transaction costs and, when rebalancing a non-qualified account, taxable events will be created that may increase your tax liability. Changes in investment strategies, contributions or withdrawals, and economic conditions may materially alter the performance of your portfolio. There are no assurances that a portfolio will match or outperform any particular benchmark.

Simplicity Wealth, LLC (the "Adviser"), has developed an investment program (the "Program") through which it manages each client account according to the model investment portfolios (the "Portfolios") shown in this Proposal. The Adviser has developed and will continue to develop investment strategies (collectively, the "Strategies") to manage each Portfolio to achieve a specific investment objective. The Adviser will recommend one or more Portfolios that are consistent with the client's investment objectives, risk tolerance, time horizon and other critical factors relevant to the client's financial situation (the "Client Profile"). The proposed Portfolio recommended by the Adviser may include a blended Strategy(ies) comprised of an allocation to multiple asset classes. Additional important information regarding the Adviser, its investment management services, compensation, conflicts of interest and other matters are contained in its Form ADV, Part 2A disclosure document, which is available from the Adviser's website: SimplicityWealth.com or upon request to the Adviser's Chief Compliance Officer at: wealth.compliance@simplicitygroup.com or 475 Springfield Avenue; Summit, New Jersey 07901.

CLIENT-PROVIDED DATA

This report relies on financial statements and data that you provided to your financial advisor. Our firm is not responsible for any errors or misstatements that result from inaccurate or incomplete data received from you or your financial advisor.

MANUALLY-ENTERED DATA

The accuracy and authenticity of manually entered data is reliant solely on the author of the information and not controlled by or attested to by our firm nor its affiliates or business partners. Therefore, the information provided should be regarded as informational only and not interpreted as official or legal financial positions.

INVESTMENT RISK

Different types of investments involve varying degrees of risk, and there can be no assurance that the future performance of any specific investment, investment strategy, or product made reference to directly or indirectly in this report, will be profitable, result in the achievement of any investment objective, equal any corresponding indicated historical performance level(s), or be suitable for your portfolio. Significant losses of principal or income may occur. You could lose all of your investment. Additional investment risks are explained in Simplicity Wealth's ADV Part 2A.

- **Interest Rate Risk:** Portfolios may change in response to the movement of interest rates. The price of a fixed income security will generally fall when interest rates rise.
- **Credit Risk:** The value of a portfolio may change in response to changes in the credit ratings of the portfolio's securities. Generally, investment risk and price volatility increase as a security's credit rating declines.

DISCLOSURE

Important Disclosures (Cont.)

- **Default Risk:** High Yield bonds are considered speculative and are susceptible to default or decline in value due to adverse economic and business developments.
- **Foreign Risk:** Foreign investments are subject to the same risks as domestic investments and additional risks, including international trade, currency, political, regulatory and diplomatic risks, which may affect their value. Also, foreign securities are subject to the risk that their market price may not reflect the issuer's condition because there is not sufficient publicly available information about the issuer.
- **Asset Allocation Risk:** The success of asset allocation depends upon the manager's ability to make decisions that will achieve an account's objectives. Asset categories may not perform as expected due to economic and market influences both foreign and domestic and anticipated returns may not be realized.
- **Inflation Risk:** The value of assets or income from investments may be worth less in the future as inflation decreases the value of money.
- **Sector Risk:** When a substantial portion of assets are devoted to a particular market sector or industry, there is potentially greater volatility compared to broadly diversified strategies. A market sector or industry may underperform the market as a whole for a variety of reasons.
- **Equity Market Risk:** Stocks have risk in that their returns and the principal invested in them is not guaranteed and they are subject to changing market conditions. Small stocks are more volatile than large stocks and are subject to significant price fluctuations.
- **See Underlying Securities** section of this document for additional details regarding the risks associated with various investment product types.

FEES & EXPENSES

Total costs include Internal Fees and any applicable Advisor Compensation, but does not include transactional, custodial, maintenance, or tax-related expenses. Internal fees are the weighted average expenses of the investment products included in each account, and are provided by third party data (e.g. Tiingo). In certain situations, there is insufficient data for a portfolio holding, which necessitates the use of a proxy fund to illustrate that holding's impact on the portfolio. Internal expenses are reported by Tiingo based on the publicly-available filings for each holding. The use of a proxy fund will impact the internal expenses reported for the current portfolio (See, "Proxy Fund" section for additional information).

The Advisor Compensation for proposed accounts reflects the total advisory fee and management fee for managed accounts, and any annuity fees for annuity products. The current portfolio Advisor Compensation may include estimated advisory fees, levelized commissions, estimated 401(k) fees, estimated transaction costs, and annuity fees.

DISCLOSURE

Important Disclosures (Cont.)

Annuity fees include applicable mortality and expense (M&E) fees as well as applicable living and death benefit rider fees, which is provided by third parties. In many cases, the current account statements do not report the Advisor Compensation. In these situations, for current accounts, we use estimates. Please be aware, these estimations may not reflect the actual Advisor Compensation associated with your account.

Prospective clients should consider all of these fees and charges when deciding whether to invest in the proposed Portfolio. The hypothetical performance results for the proposed Portfolio does not reflect the impact of taxes. The proposed Portfolio may require a significant amount of trading. Gains or losses will generally be short-term in nature; consequently, this investment account may not be suitable for clients seeking tax efficiency.

TAX STATUS

The tax status of each account is reported according to the account type. Individual, joint, and trust accounts are considered taxable; Roth IRAs are after-tax; and qualified retirement accounts, such as IRAs and 401(k) accounts are considered tax deferred.

FIXED ANNUITIES

Fixed annuities are long-term investment vehicles. Early withdrawal may result in tax liability, penalties and/or surrender charges. These charges may result in a loss of bonus, indexed interest and fixed interest, and a partial loss of your principal. Bonus Annuities may include annuitization requirements, lower capped returns, or other restrictions that are not included in similar annuities that don't offer a premium bonus feature. Riders are available at an additional cost and are subject to conditions, restrictions and limitations and benefits are generally not available as lump sum payout. Guarantees, if any, are backed by the financial strength and claims-paying ability of the issuing insurance company. Review the disclosures of the specific insurance company illustration provided for any insurance product owned. Should the information you've provided or your personal circumstances or goals change at any time please be sure to discuss this with your financial advisor. Simplicity Wealth does not offer insurance and annuity products that pay a commission. However, these products may be reflected on this report and offered by your financial advisor.

VARIABLE ANNUITIES

Variable annuities are contracts issued by insurance companies into which the buyer makes a lump-sum payment or series of payments. In return, the insurer agrees to provide either a regular stream of payments beginning immediately (or at some future date) or a lump-sum payout at a future time. The client pays premiums to the issuing insurance company. At the client's direction, the insurer allocates the client's premium payments to investment options, or sub-accounts (which are similar to mutual funds) comprised of stocks, bonds, or other investments. When you invest in a variable annuity, any growth credited to your account is credited to your account but is not taxed until you take distributions, at which point you pay taxes on any gains. Withdrawals before the age of 59 ½ may also incur a federal tax penalty. Because variable annuities possess insurance features, they have fees and/or expenses that are not found in other investment products. The fees or expenses that you pay vary depending on the terms and share class of the annuity purchased. Simplicity Wealth does not offer insurance and annuity products that pay a commission. However, these products may be reflected on this report and offered by your financial advisor. Please refer to the prospectus for information specific to the variable annuity you purchase.

DISCLOSURE

Important Disclosures (Cont.)

ASSET CLASS METHODOLOGY

Many portfolios contain holdings that have recent inception dates. This can result in misleading risk and return data because those holdings will be excluded from the portfolio data. Asset allocation is one of the determinants of portfolio returns along with security selection and market timing. Therefore, we believe it is appropriate to examine the asset allocation of the current and proposed portfolios in an effort to aid the discussion of portfolio diversification, risk, and performance. Each holding is filtered based on its exposure to equities, bonds, other assets, and cash. Asset name, region, sector, subsector, market cap, and credit quality are considered, as necessary, to parse exposure to asset classes. Note that this analysis is performed based on data provided by Morningstar, which analyzes each fund based on its individual holdings, but the underlying holdings are not individually analyzed by our firm as a part of this analysis. This asset class breakdown may not perfectly reflect each portfolio's asset allocation. After the asset class breakdown is determined, each asset class is represented by a market index, and a weighted average composite return series is created for both the current and proposed portfolios. This composite return data has sufficiently long history available because it is derived from indexes. In each instance where asset class data is used, there is a notation on the page to make that clear.

RISK SCORE

The VaR (Value at Risk) scoring approach is Simplicity's objective measurement of a client's risk tolerance to the magnitude and speed of potential investment loss ("Client VaR Score") when selecting model portfolios with optimal asset allocations ("Model Portfolio VaR Score"). The Client VaR Score estimates potential loss with 95% confidence during normal market conditions, within a set time period, and is calculated utilizing the parametric method in value at risk and forward-looking capital market assumptions. This method assumes that outcomes are normally distributed about the mean return. The Client VaR Score attempts to mitigate the effects of financial biases and gauge your tolerance for potential loss over 3-month, 6-month, and 12-month time horizons. This analysis helps us establish and maintain the proper portfolio asset allocation so that you can remain committed to your investment plan throughout all market cycles. The Client VaR Score is assumed to be applicable to all accounts in the household unless specific accounts have been scored separately. The 3-month, 6-month, and 12-month return, and risk/reward representations are based on a household asset allocation commensurate with the Client VaR Score and uses forward-looking capital market assumptions as the basis for the probable range of potential returns.

The Model Portfolio VaR Score is calculated by measuring your portfolio's historic volatility. Historic portfolio volatility is assumed to be stable over long-term time horizons and representative of future portfolio volatility derived from forward-looking capital market assumptions. In calculating the Model Portfolio VaR score for a current portfolio, existing security holdings and weights are assumed to have been held constantly for the trailing 5 years. Performance data for the current portfolio, including mean return and standard deviation, is derived through a methodology called "backtesting" and is therefore hypothetical.

DISCLOSURE

Important Disclosures (Cont.)

In calculating the Model Portfolio VaR score for a proposed portfolio, the model manager's performance, including mean return and standard deviation, is used for the trailing 5 years. To the extent that a full 5 years of the model manager's performance is unavailable via standard institutional databases, residual performance data is generated by "backfilling" with a blended benchmark in which multiple indexes' historical performance are combined in order to reflect the investment style's desired allocations. In some cases, performance data is generated for the proposed model portfolio solely from backfilling with an appropriate blended benchmark. In calculating a household Model Portfolio VaR Score, the return history for multiple accounts is combined according to the relative percentage of total household assets to generate performance data. Both the Client VaR Score, the Model Portfolio VaR Score(s), and the household Model Portfolio VaR Score are assigned a value from 0 - 100 utilizing a cumulative normal distribution function and then indexed on a scale from Conservative to Aggressive.

DRAWDOWN

The drawdown displayed for the current and proposed portfolios is hypothetical, is not reflective of actual accounts and not indicative of future risk, downside, or the potential for loss. The drawdown figures shown reflect the impact of annuities and structured products. The allocation to structured products and annuities are assumed to have a max drawdown of zero; however, structured products and annuities have unique risks and are intended to be held until maturity. These products are subject to market loss and volatility. If these products are not held until the intended maturity, additional risks and expenses will likely apply and result in loss of principal.

MODEL PORTFOLIOS

Adviser's investment decisions for the client and the construction of the proposed Portfolios may be guided by third-party Managers of the underlying model portfolios recommended. The investment buy and sell signals (rebalancing) of the model portfolios are made by the Manager. The Adviser will be responsible for monitoring the Manager's investment decisions and may select or change a Manager at any time. In the event the Adviser does not agree with a proposed change, the Adviser may accept or reject such recommended trade or model portfolios, as it deems appropriate. Any historical model performance results provided by third-party Managers have not been independently verified by the Adviser and are used in reliance on accuracy and completeness of the third-party's performance calculation process.

UNDERLYING SECURITIES

The Current portfolio may be composed of mutual funds, exchanged traded products (such as exchange traded funds, or ETFs and exchange traded notes, or ETNs), individual securities, variable annuities, fixed annuities, and/or other investment products. The proposed portfolio may be composed of similar investment products, current holdings that are held-in-kind, as well as structured products (such as market linked CDs, or MLCDS). Each of these products has unique risks. See Investment Risk section of this document for additional information. Investors should carefully consider the investment objectives, risks, fees and expenses before investing. For this and other important information please review the issuer communications and disclosure documents. Read this information carefully before investing..

DISCLOSURE

Important Disclosures (Cont.)

- An **ETF** is a registered investment company that typically has an investment objective of striving to achieve a similar return as a particular market index. Generally, the ETF will invest in either all or a representative sample of the securities included in the index it is seeking to replicate. ETFs are usually traded on a secondary market at a market price that may be higher or lower than its net asset value. These securities may not accurately track their underlying index and may not have liquidity under severe market conditions.
- **Exchange Traded Notes** are unsecured debt instruments. As such, are subject to risk by default by the issuing bank (counterparty risk) as well as market risk. Exchange traded notes may fail to track the index they are designed to track as well as being negatively impacted by a decline in the credit rating of the issuer.
- A **closed-end fund** is a registered investment company, which typically makes one public offering of a fixed number of shares. Thereafter, shares are traded on a secondary market such as the New York Stock Exchange. As a result, the secondary market price may be higher or lower than the closed-end fund's net asset value (NAV). If these shares trade at a price above their NAV, they are said to be trading at a premium. Conversely, if they are trading at a price below their NAV, they are said to be trading at a discount. These securities frequently trade at a discount from net asset value, which can create a risk of loss for investors purchasing shares in, or shortly after, an initial public offering. Further, the portfolio managers may use leverage which can magnify losses.
- An **open-end fund** is a registered investment company, which typically makes one public offering of a fixed number of shares. Thereafter, shares are traded on a secondary market such as the New York Stock Exchange. As a result, the secondary market price may be higher or lower than the closed-end fund's net asset value (NAV). If these shares trade at a price above their NAV, they are said to be trading at a premium. Conversely, if they are trading at a price below their NAV, they are said to be trading at a discount. These securities frequently trade at a discount from net asset value, which can create a risk of loss for investors purchasing shares in, or shortly after, an initial public offering. Further, the portfolio managers may use leverage which can magnify losses.
- **Structured products** are unsecured debt securities of an issuer that are linked to the performance of an underlying asset, such as a basket of securities or market index. Structured products are typically the combination of a note (or other corporate bond) and a derivative (such as an option). Structured products may not be appropriate for investors seeking current income, as they may not pay interest or the interest they pay may vary in amount or timing. It may be possible to lose the entire amount of principal invested in a structured product. Before investing in a structured product, investors should carefully read its offering documents and make sure they fully understand the specific terms and conditions for that product. The structured product may not provide a return, and/or the return may be significantly less than what an investor could have received by investing directly in the underlying asset or other security. Market-Linked CDs (MLCDs) are a type of structured products. The return for many MLCDs is based on the reference index value at inception relative to the reference index value at maturity. Therefore, depending on the timing of purchase, the reference index value will directly impact the value received at maturity. Structured products are complex and may use advanced trading techniques such as leverage, options, futures, swaps, and other derivatives which lead to additional risks. Investing in a structured product should not be compared to investing in the underlying asset, as the features and risks may differ significantly. As unsecured debt securities, structured products are not backed by collateral and they are subject to the creditworthiness of the issuer to make interest payments and repay principal. Structured products may not be listed on a national securities exchange and are intended to be held until maturity. An investor may not be able to sell the structured product prior to maturity and is unlikely to receive the full amount invested. Structured products have an uncertain tax treatment due to limited guidance. Investors should consult with a tax advisor prior to investing in a structured product. For FDIC-insured MLCDs, FDIC coverage generally applies to the amount of invested principal only.

DISCLOSURE

Important Disclosures (Cont.)

Any appreciation relating to the linked index or benchmark is not FDIC-insured. If you hold more than the FDIC-insured limitations in deposits with the issuing bank, you will not receive the benefit of FDIC insurance for any balance in excess of FDIC limits. In this instance, amounts in excess of FDIC-insured limits are subject to the credit risk of the issuing bank. For more information, please visit www.fdic.gov.

MODEL PERFORMANCE

Performance for each model reflects the actual performance information of the model. The performance results of the underlying holdings in the model portfolio assume the reinvestment of dividends and other earnings and include the advisory and management fee that is proposed.

BENCHMARK DISCLOSURE

The portfolios will be measured using an appropriate static benchmark that is a representative of a typical similar risk profile to yours. Your investment may or may not achieve similar results to this benchmark in all categories including but not limited to aggregate return, aggregate cash flow (yield), risk, as measured by Standard Deviation, maximum drawdown. Benchmarks are a measurement tool to help create a gauge of relative performance over a complete market cycle. The specific mix of strategies and asset classes deployed in your portfolio may significantly differ from the components of the risk-based benchmark listed below. Benchmark returns include the advisory and management fee that is proposed and assume that all dividends and interest are reinvested. You cannot directly purchase an index.

ASSETLOCK DISCLOSURE AND DISCLAIMER

AssetLock® is tracking software used to monitor the performance of a client's household portfolio and predetermine the amount of downside the client is willing to tolerate. The AssetLock Threshold is the maximum percentage of the downside the investor is willing to accept inside the portfolio as determined by Simplicity's proprietary risk scoring algorithm, which is based on a Risk Tolerance Questionnaire and Value at Risk (VaR) Analysis of the household and model portfolio(s). It is NOT an actual stop order and will NOT automatically sell the individual securities in the household portfolio. The information provided here is not investment, tax or financial advice. You should consult with a licensed professional for advice concerning your specific situation.

PROPOSED INVESTMENTS

Hypothetical Performance Disclosure

The hypothetical performance analysis presented here is based upon the asset allocation blend of the recommended model portfolios ("Blended Models"). Hypothetical performance used in this presentation is calculated based upon the historical asset allocation of the models. The historical model performance may not reflect current model asset allocations. The recommended holdings comprising the model portfolio and the allocations to those holdings have changed over time and may change in the future. The performance results of the underlying holdings in the Blended Model assume the reinvestment of dividends and other earnings and include the advisory and management fee that is proposed. Performance for the Current investment holdings is based on information provided by you and has been calculated for the time period presented for comparison purposes. The time period presented may not reflect the actual holding period of the investments and thus the performance results would be hypothetical. The performance results of the Current investment holdings assume the reinvestment of dividends and other earnings and include the advisory and management fee that is proposed. Hypothetical results have certain inherent limitations, particularly that such results do not represent actual trading and that they may not reflect the impact that material economic and market factors might have had on the Adviser's decision making if the Adviser was actually managing clients' money. The information is based on data received from the Adviser and other sources. Past performance is no guarantee of future results.

TERMINOLOGY AND DEFINITIONS

Advisory Fee: Is the amount paid (a percentage of the assets managed) as a consulting charge for advisory services relating to money management.

Alpha: Alpha is used to describe an investment strategy's ability to outperform the market. An alpha of 1.0 means the fund outperformed the market 1.0%, when adjusted for market risk.

Annualized Returns: Returns for periods longer than one year are expressed as annualized returns. This is equivalent to the compound rate of return which, over a certain period of time, would produce an investment's total return over that same period.

Asset Mapping: Is a process used by investors and financial professionals to visually represent and analyze the current investment portfolio and how a proposed portfolio will reposition the assets to help the investor achieve their financial needs and goals within their risk tolerance and tax budget.

Beta: Beta is a measure of the volatility – or systematic risk – of a portfolio compared to the market. A beta greater than 1.0 indicates that portfolio will be more volatile than the market (the utilized benchmark).

Blended Benchmark: The value represents the weighted allocations to the benchmarks associated to the recommended product array. An example of 60% Equity/40% Fixed Income.

Carrier: Also known as an insurance provider, insurer, or insurance company, is an entity that assumes financial responsibility for providing insurance policies, such as a proposed guaranteed income for life product (annuity) to individuals or organizations.

Cash or Cash Equivalents: This asset class is designated to represent the performance of an unmanaged portfolio of 90-day Treasury bills. Being short term and US guaranteed, the asset class carries little currency or little interest rate risk and represents extremely safe investments.

Corporate Bonds: A corporate bond is a debt security issued by a corporation and sold to investors. The backing for the bond is usually the payment ability of the company, which is typically money to be earned from future operations. In some cases, the company's physical assets may be used as collateral for bonds. Corporate bonds are considered higher risk than government bonds. The bond rating represents the ability of the issuer to make timely periodic payments of interest and principal repayment at maturity, i.e., the relative default risk of the issuer.

Custodian: Also known as a custodian bank or a custodial institution, is a financial entity that is responsible for holding and safeguarding financial assets on behalf of investors or financial institutions. The assets held by the custodian can include various types of securities, such as stocks, bonds, mutual funds, exchange-traded funds (ETFs), and other investment vehicles.

Direct Indexing: is an investment strategy that involves the purchase of individual stocks to replicate a target index (e.g., S&P 500), and can provide greater control and tax advantages to an investor.

Down Capture: The down-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has fallen.

Drawdown: The high-to-low decline during a specific record period of an investment. A drawdown is usually quoted as the percentage between the peak and the trough.

Emerging Markets: Rapidly developing countries that are open to foreign investment. Investments in this class are subject to stock and bond market volatility, currency risks as well as the potential to carry a higher-than-average risk of liquidity and political uncertainty.

ESG and SRI Investment Options: ESG (Environmental, Social, and Governance) and SRI (Socially Responsible Investing) investing options allow investors to apply non-financial factors (their values) as part of their investment preferences.

Expense Ratio: Measures how much of an investment fund's assets are used for administrative and other operating expenses and is typically deducted from the fund's gross return and paid to the fund manager.

Financial Planning Considerations: Are universal considerations that can impact one's ability to achieve their short- and long-term financial goals including

- **Longevity:** Outliving financial assets as the result of a longer life
- **Liquidity:** Limited access to assets to meet life's unexpected financial needs
- **Inflation:** Reduction in real purchasing power as the result of increasing cost of living
- **Market:** Unexpected reduction in the value of financial assets at the time of withdrawal
- **Mortality:** Loss of financial assets as the result of a partner's or spouse's death
- **Taxes:** Decreased income and assets and/or the impairment of legacy assets from increasing taxes

Global Fixed Income: An investment in a blend of foreign fixed income products.

Growth of \$1,000 Chart: Is a chart that illustrates the potential or realized change in the value of an initial \$1,000 investment in a financial asset or model portfolio since inception of ownership.

High-Yield Bonds: A high-paying bond with a lower credit rating (usually below BBB- from Standard and Poors or below BAA3 from Moody's) than investment grade corporate bonds, Treasury bonds and investment grade municipal bonds. The higher risk of default of these bonds results in a higher yield than investment grade bonds.

Historical Returns by Period Chart: Is a chart that displays historical returns and other standard performance measurements for various periods of time.

Household VaR Score: Is Simplicity Wealth's proprietary risk score for a composite of various account types and registrations that may hold different model portfolios, securities and/or annuities, all within the same client household.

International Large Cap: Foreign-based companies with a market capitalization value of more than \$10 billion. Large cap is an abbreviation of the term 'large market capitalization.' Stocks in this asset class generally have high to moderate liquidity and are generally sensitive to both economic sector and industry group performance.

International Small Cap: A term used by the investment community to refer to foreign-based companies with a market capitalization between \$300 million and \$2 billion. Small cap is an abbreviation for the term small capitalization.' Stocks in this asset class generally have less liquidity than large cap stocks and can be somewhat less sensitive to economic sector and industry performance but can be more volatile.

Information Ratio: Is a ratio of portfolio returns above the returns of a benchmark (usually an index) measured against the volatility of those returns. The information ratio (IR) measures a portfolio manager's ability to generate excess returns relative to a benchmark, but also attempts to identify the consistency of the investor. This ratio will identify if a manager has outperformed the benchmark by a lot in a few months or a little every month.

Intermediate Term Government Bonds: An investment in intermediate term (generally, maturities between five and ten years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk but are sensitive to interest rate risk.

Investment Account Registration: Is the ownership structure of an investment account that provides for legal rights of ownership, taxation, and distribution of assets at death.

Long term Government Bonds: An investment in long-term (generally more than ten years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk but are more sensitive to interest rate risk.

Management Fee: Is a fee imposed by an investment manager to cover the costs of overseeing an investment fund with the purpose of remunerating the managers for their efforts and expertise in selecting stocks and effectively managing the portfolio.

Model Portfolio VaR Score: Is Simplicity Wealth's proprietary risk score for an investment portfolio that provides an understanding of its relative risk profile utilizing a classic mean-variance framework and then scored on a scale from 0 to 100.

Real Estate/REITS: A term used to describe a security that sells like a stock on the major exchanges and invests in real estate directly, either through properties or mortgages. Investing in REITS is a liquid, dividend paying means of participating in the real estate market. However, they may be subject to varying degrees of interest rate risk and may be subject to geographic real property risks (i.e., earthquakes, floods, etc.).

Risk-Reward Chart: Is a chart that represents the mean and standard deviation return figures for a model portfolio over a specified time period.

Sharpe Ratio: Sharpe ratio is defined as the ratio of the manager's arithmetically annualized expected investment return minus the risk-free rate of return dividend by the annual standard deviation of the expected return over the same time period.

Short Term Government Bonds: An investment in short term (generally one-to-three years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk and are moderately sensitive to interest rate risk.

Standard Deviation: A statistical measure of the historical volatility of a mutual fund or portfolio. More generally, a measure of the extent to which numbers are spread around their average.

Tax-Loss Harvesting: An investment strategy that involves selling some stocks at a loss to offset the gains realized by selling other stocks at a profit.

Tax-Optimized Transition: is a sophisticated transfer strategy for eliminating an investor's tax-burdened legacy positions (a portfolio containing unrealized gains and/or losses) by gradually transferring assets to a new portfolio tax efficiently.

Tracking Error: A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.

Up Capture: The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen.

U.S. Fixed Income: An investment category that consists of a blend of US fixed income products.

U.S. Large Cap Value: A term used by the investment community to refer to US-based companies with a market capitalization value of more than \$10 billion. Large cap is an abbreviation of the term 'large market capitalization.' A value stock is one that tends to trade at a lower price relative to its fundamentals (i.e., dividends, earnings, sales, etc.) and thus considered undervalued by value investors. Stocks in this asset class generally have high-to-moderate liquidity and are generally sensitive to both economic sector and industry group performance.

U.S. Mid Cap Growth: A term used by the investment community to refer to US-based companies with a market capitalization between \$2 and \$10 billion. Mid cap is an abbreviation for the term 'middle capitalization.' A growth stock is one whose earnings are expected to grow at an above-average rate relative to the market. A growth stock company is more likely to retain earnings to reinvest in capital projects versus pay dividends. Stocks in this asset class typically provide adequate liquidity and are sensitive to their economic sector and industry performance.

U.S. Small Cap: A term used by the investment community to refer to US-based companies with a market capitalization between \$300 million and \$2 billion. Small cap is an abbreviation for the term 'small capitalization.' Stocks in this asset class generally have less liquidity than Large Cap stocks and can be somewhat more sensitive to economic sector and industry performance and can be more volatile.

U.S. Microcap: A term used by the investment community to refer to US-based companies with a market capitalization between \$30 and \$300 million. The term Microcap is applied to companies with low or micro capitalization. Stocks in this asset class are extremely sensitive to their economic sector and industry performance and can be very volatile.

VaR Score: Is Simplicity Wealth's proprietary risk scoring methodology that utilizes the Parametric VaR ("Value at Risk") formula at the 95% confidence level alongside forward-looking long-term capital market assumptions to quantify a client's feelings about potential investment portfolio loss and understand commensurate risk-return expectations. The VaR Score has a range from 0 – 100 and represents relative risk tolerance profiles from conservative to aggressive.

Bloomberg 1-5 Yr Treasury TR USD

Assigned to: Short Duration

This index measures the performance of US dollar-denominated, fixed-rate, nominal debt issued by the US Treasury with 1-5 year maturities.

Bloomberg Global Aggregate TR USD

Assigned to: Global Fixed Income

The index measures the performance of global investment grade fixed-rate debt markets, including the US Aggregate, the Pan-European Aggregate, the Asian-Pacific Aggregate, Global Treasury, Eurodollar, Euro-Yen, Canadian, and Investment Grade 144A index-eligible securities.

Bloomberg Government 1-5 Yr TR USD

Assigned to: Short Duration

The index measures the performance of US Treasuries and US Agency bonds with maturities of 1 (inclusive) to 5 (exclusive) years.

Bloomberg US Govt/Credit 1-5 Yr TR USD

Assigned to: Short Duration

The index measures the performance of the non-securitized component of the US Aggregate Index including treasuries, government-related issues and corporates with maturities of one to five years. It is a subset of the US Aggregate Index.

Bloomberg Muni 1-5 Yr Blend(1-6) TR USD

Assigned to: Municipals

The index measures the performance of USD-denominated long-term tax exempt bond market with maturities of 1-5 years, including state and local general obligation bonds, revenue bonds, insured bonds, and prerefunded bonds. It is a subset of overall Municipal index.

Bloomberg Municipal 3-15Y Blend 2-17Y TR

Assigned to: Municipals

This index measures the performance of the Bloomberg Barclays US Municipal bond, which covers the USD-denominated Long-Term tax exempt bond market with four main sectors: state and local general obligation bonds, revenue bonds, insured bonds and pre-refunded bonds. It is a sub index of the Bloomberg Barclays Municipal Bond, which select the bonds with 3-15 years and 2-17 years maturities.

Bloomberg Municipal TR USD

Assigned to: Municipals

The index measures the performance of the Bloomberg US Municipal bond, which covers the USD-denominated Long-Term tax exempt bond market with four main sectors: state and local general obligation bonds, revenue bonds, insured bonds and prerefunded bonds.

Bloomberg US Agg Bond TR USD

Assigned to: Aggregate Bond

The index measures the performance of investment grade, US dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM passthroughs), ABS, and CMBS. It rolls up into other Bloomberg flagship indices, such as the multi-currency Global Aggregate Index and the US Universal Index, which includes high yield and emerging markets debt.

Bloomberg US Credit TR USD

Assigned to: Corporate Bond

The index measures the performance of the US Corporate and a non-corporate component that includes foreign agencies, sovereigns, supranationals and local authorities. It is a subset of the US Government/Credit Index and the US Aggregate Index.

Bloomberg US Intermediate Credit TR USD

Assigned to: Intermediate Duration

The index measures the performance of the US Corporate and a non-corporate component that includes foreign agencies, sovereigns, supranationals and local authorities with maturities of 1-10 years. It is a subset of the US Government/Credit Index and the US Aggregate Index.

Bloomberg USFRN Corporates TR USD

Assigned to: Corporate Bond

The Bloomberg USFRN < 5 Year Index measures the performance of the USD-denominated, investment grade, floating-rate notes across corporate and government-related sectors. It is a subset of the US Floating Rate Note with minimum of 1 month and maximum of 4.9999 years to final maturity.

ICE BofA 2-17Y US Muni TR USD

Assigned to: Municipals

The ICE BofA 2-17Y US Muni TR USD is an unmanaged index composed of securities that are SEC-registered, tax-exempt, and dollar-denominated. The index covers the intermediate US investment grade fixed rate municipal bond market, with index components for municipal securities.

ICE BofA 0-1Y US Trsy TR USD

Assigned to: Short Duration

The ICE BofA 0-1 Year US Treasury Index tracks the performance of US dollar denominated sovereign debt publicly issued by the US government in its domestic market with maturities less than a year.

ICE BofA 1-10 AAA-A US Corp&Gvt TR USD

Assigned to: Intermediate Duration

The index measures the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities and all securities with a remaining term to final maturity less than 10 years and rated AAA through A3, inclusive. Index constituents are market capitalization weighted.

ICE BofA 1-10Y US Muni TR USD

Assigned to: Municipals

This Index measures the performance of US dollar denominated investment grade tax-exempt debt publicly issued by US states and territories, and their political subdivisions, in the US domestic market. The index are capitalization-weighted based on their current amount outstanding times the market price plus accrued interest.

ICE BofA 1-5 AAA-A US Corp&Govt TR USD

Assigned to: Short Duration

The index measures the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities and all securities with a remaining term to final maturity less than 5 years and rated AAA through A3, inclusive. Index constituents are market capitalization weighted.

ICE BofA 1-5Y US Muni TR USD

Assigned to: Municipals

The ICE BofA 1-5 Year US Municipal Securities Index is a subset of ICE BofA US Municipal Securities Index including all securities with a remaining term to final maturity less than 5 years.

ICE BofA 9-12 Month US Treasury TR USD

Assigned to: Cash or Equivalent

The ICE BofA 9-12 Month US Treasury Index is a subset of ICE BofA 0-1 Year US Treasury Index including all securities with a remaining term to final maturity greater than or equal to 9 months and less than 12 months.

ICE BofA AAA-A US Corp&Govt TR USD

Assigned to: Long Duration

The index measures the performance of US dollar denominated investment grade debt publicly issued in the US domestic market, including US Treasury, US agency, foreign government, supranational and corporate securities and all securities rated AAA through A3, inclusive. Index constituents are market capitalization weighted.

ICE BofA US Muni TR USD

Assigned to: Municipals

The ICE BofA US Municipal Securities Index tracks the performance of US dollar denominated investment grade tax-exempt debt publicly issued by US states and territories, and their political subdivisions, in the US domestic market.

iShares Core High Dividend ETF

Assigned to: Large Value

The investment seeks to track the investment results of the Morningstar® Dividend Yield Focus IndexSM composed of relatively high dividend paying US equities. The underlying index is comprised of qualified income paying securities that are screened for superior company quality and financial health as determined by Morningstar, Inc.'s proprietary index methodology. The fund is non-diversified.

iShares MSCI USA Min Vol Factor ETF

Assigned to: Large Blend

The investment seeks the investment results of the MSCI USA Minimum Volatility (USD) Index. The index measures the performance of large and mid-capitalization equity securities listed on stock exchanges in the US that, in the aggregate, have lower volatility relative to the large- and mid-cap US equity market.

iShares MSCI USA Momentum Factor ETF

Assigned to: Large Growth

The investment seeks to track the investment results of the MSCI USA Momentum SR Variant Index. The index consists of stocks exhibiting relatively higher momentum characteristics than the traditional market capitalization-weighted parent index, the MSCI USA Index.

iShares MSCI USA Quality Factor ETF

Assigned to: Large Blend

The investment seeks to track the investment results of the MSCI USA Sector Neutral Quality Index composed of US large- and mid-capitalization stocks with quality characteristics as identified through certain fundamental metrics. The index is based on a traditional market capitalization-weighted parent index, the MSCI USA Index.

iShares MSCI USA Value Factor ETF

Assigned to: Large Value

The investment seeks to track the investment results of the MSCI USA Enhanced Value Index composed of US large- and mid-capitalization stocks with value characteristics and relatively lower valuations. The index is based on a traditional market capitalization-weighted parent index, the MSCI USA Index (the "parent index"). The parent index includes US large- and mid-capitalization stocks.

Morningstar Con Tgt Risk TR USD

Assigned to: Multi-Asset

The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Conservative Target Risk Index seeks approximately 20% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar Mod Tgt Risk TR USD

Assigned to: Multi-Asset

The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Moderate Target Risk Index seeks approximately 60% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

MSCI ACWI Ex USA NR USD

Assigned to: Large Blend

The index measures the performance of the large and mid cap segments of the particular regions, excluding USA equity securities, including developed and emerging market. It is free float-adjusted market-capitalization weighted.

MSCI ACWI Ex USA IMI NR USD

Assigned to: Large Blend

The index measures the performance of large, mid and small cap representation across 22 of 23 developed (excluding the United States) and 23 emerging markets equity securities. It covers approximately 99% of the global equity opportunity set outside the US. The index is free float-adjusted market capitalization weighted.

MSCI ACWI NR USD

Assigned to: Large Blend

The index measures the performance of the large and mid cap segments of all country markets. It is free float-adjusted market-capitalization weighted.

MSCI ACWI Value NR USD

Assigned to: Large Value

The MSCI ACWI Value Index captures large and mid cap securities exhibiting overall value style characteristics across 23 Developed Markets countries* and 25 Emerging Markets (EM) countries*. The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield.

MSCI World NR USD

Assigned to: Large Blend

The index measures the performance of the large and mid cap segments of world equity securities. It is free float-adjusted market-capitalization weighted.

Russell 1000 Growth TR USD

Assigned to: Large Growth

The index measures the performance of the large-cap growth segment of the US equity securities. It includes the Russell 1000 index companies with higher price-to-book ratios and higher forecasted growth values. It is market-capitalization weighted. Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

Russell 1000 TR USD

Assigned to: Large Blend

The index measures the performance of the large-cap segment of the US equity securities. It is a subset of the Russell 3000 index and includes approximately 1000 of the largest securities based on a combination of their market cap and current index membership.

Russell 1000 Value TR USD

Assigned to: Large Value

The index measures the performance of the large-cap value segment of the US equity securities. It includes the Russell 1000 index companies with lower price-to-book ratios and lower expected growth values. It is market-capitalization weighted. Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

Russell 2000 TR USD

Assigned to: Small Blend

The index measures the performance of the small-cap segment of the US equity universe. It is a subset of the Russell 3000 and includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Russell Investment Group.

Russell 2500 TR USD

Assigned to: SMID Blend

The index measures the performance of the small to mid-cap segment of the US equity universe. It is a subset of the Russell 3000 index and includes approximately 2500 of the smallest securities based on the combination of their market cap and current index membership.

Russell 3000 TR USD

Assigned to: All Cap

The index measures the performance of the largest 3000 US companies representing approximately 98% of the investable US equity market. It is market-capitalization weighted.

Russell Mid Cap TR USD

Assigned to: Mid Blend

The index measures the performance of the mid-cap segment of the US equity universe. It is a subset of Russell 1000 index and includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The index represents approximately 31% of the total market capitalization of the Russell 1000 companies.

Russell Top 50 Mega Cap TR USD

Assigned to: Large Blend

The index measures the performance of 500 widely held stocks in US equity market. Standard and Poor's chooses member companies for the index based on market size, liquidity and industry group representation. Included are the stocks of industrial, financial, utility, and transportation companies. Since mid 1989, this composition has been more flexible and the number of issues in each sector has varied. It is market capitalization-weighted.

S&P 500 TR USD

Assigned to: Large Blend

The index measures the performance of 500 widely held stocks in US equity market. Standard and Poor's chooses member companies for the index based on market size, liquidity and industry group representation. Included are the stocks of industrial, financial, utility, and transportation companies. Since mid 1989, this composition has been more flexible and the number of issues in each sector has varied. It is market capitalization-weighted.

S&P Target Date Retirement Income TR USD

Assigned to: Multi-Asset

The index measures the performance of a multi-asset portfolio, including equities, fixed income and commodities. The index belongs to S&P Target Date Index Series which comprises eleven indexes with different target retirement date. Each index in this series is determined once a year through survey of large fund management companies that offer target date products.

Nature of Report and FDI's Role

This report was prepared solely by Fiduciary Benchmarks Insights, LLC DBA Fiduciary Decisions (FDI) with data provided by various service providers. FDI has provided the report to support a preliminary discussion of your plan's fees and services.

This report is provided for educational and informational purposes only. You must decide yourself how to use and interpret the report, including whether you need a professional to assist you. Neither FDI nor any of your service providers are responsible for how you interpret or use the information. The report is a tool to aid you in evaluating your plan and should not be the sole source of information you use to evaluate your plan.

This report is not investment advice and FDI does not act as an "investment advisor" as defined in the Investment Advisors Act of 1940. Nor is FDI a fiduciary to you under the Employee Retirement Income Security Act of 1974 ("ERISA") or any other law. FDI is not rendering legal, tax, or accounting services. Consult your tax or legal advisors before establishing a retirement plan and make sure you understand the tax, ERISA and related consequences of investments made under the plan.

Information Disclosure

The information in this report is based upon data received from (1) you and your agents and service providers regarding your retirement plan ("Subject Plan") and (2) plan sponsors of other retirement plans that have certain similarities to your plan and their agents and service providers ("Plan Universe").

The data used in this report generally has been updated within 90 days. However, data is received from various sources and at different times. In addition, much of the information in the report is time sensitive over time, different data will be available to FDI and enhancements may be made to the methodology and report and thus results may vary with each report generated. FDI is under no obligation to monitor or update this report in the future unless expressly engaged to do so. FDI may modify the content of the report at any time in its sole discretion.

Plan Profile data may only be used in conjunction with this report, and you may not extract such data from the report for any purpose. Use of Plan Profile data for any purpose other than its inclusion with this report is prohibited. For clarity and without limiting the generality of foregoing, you may not extract Plan Profile data from this report and use such extracted data as part of any other report, communication, provider search, business pricing analysis, or analytical framework. Failure to follow this restriction is a violation of Plan Profile's user agreement, constitutes grounds for termination of such agreement and/or suspension of your access to Plan Profile, and may result in additional legal action by Fiduciary Decisions.

Methodology

This report is based on the methodology utilized by FDI to gather, compile and present information. FDI may modify its methodology to gather, compile and present information at any time in its sole discretion as well as modify the content of the report at any time in its sole discretion.

This report includes a number of data points from plans offered by other employers that have certain similarities with your plan (the "Plan Universe"). FDI made a number of assumptions, which are described in the report, in compiling the plans in the Plan Universe. You should review this report carefully and independently analyze whether the Plan Universe includes plans that are sufficiently similar to your plan to make the information set forth in this report useful to you in carrying out your fiduciary functions.

Data Subsets Fiduciary Disclosure

Nature of Report and Your Advisor

The production of this report may have been paid for by a third party provider, such as an investment provider, in support of your advisor's sales and servicing efforts. While any such third party provider that pays for this report is unable to affect the output and results, they may in the future be included for your consideration as an investment option under your plan's investment menu. For specific information, please ask your advisor whether the production of this report was financed by a third party provider.

Your advisor is NOT engaged in rendering legal, tax or accounting services. This material was not intended or written to be used for the purpose of avoiding tax penalties that may be imposed on the taxpayer. Individuals are urged to consult their tax or legal advisors before establishing a retirement plan and to understand the tax, ERISA and related consequences of any investments made under such plan.

Investment Issues

Investors should consider the investment objectives, risks, charges and expenses of investment options carefully before investing. To learn more about the mutual funds in your retirement plan including the fund's investment objectives, risks, charges and expenses read the respective prospectus. This, and additional information about the funds offered in your plan can be found in the prospectuses, which can be obtained by contacting your advisor. Please read the prospectus carefully before investing.

Investments are not FDIC insured, are not guaranteed and may lose value. There is no guarantee that a mutual fund's investment objective will be met. The principal value of a mutual fund will fluctuate and may be worth more or less than your original purchase price when redeemed.

There are ongoing fees and expenses associated with investing. Bear in mind that higher return potential generally is accompanied by higher risk.

NO INVESTOR CAN INVEST DIRECTLY IN A PASSIVE INDEX

As such, investors should be aware that you cannot achieve the returns shown in benchmark calculations because an actual account will incur the deduction of transaction or custodial charges as well as the deduction of investment management fees which will decrease the historical performance results. Although client accounts may invest in securities which are consistent with the securities in an index, the Portfolios and participating accounts will also be invested in other securities which may not be part of this index. The presence of securities not included in the index, as well as the application of the Adviser's Program, differences in liquidity and other factors affecting individual accounts will cause the performance of client accounts to differ materially from the performance of the index.

Performance of the index is provided solely for purposes of comparison of the Portfolios to the broader market reflected by the index in order to assist prospective clients in determining whether this Program is generally suitable for their account. The Portfolios are not designed to directly reflect the movements of the index.

OTHER CONSIDERATIONS

Program accounts may invest in so-called "leveraged" and "inverse" ETFs. Such ETFs may seek to enhance returns through the use of financial instruments such as derivatives, swaps, margins, options and short sales. Although such investments may improve fund returns, they often have higher costs and can increase the ETFs risk of loss and magnify the ETFs' potential volatility. A common misconception is that the total return of an inverse ETF will be the exact opposite of the total return of the index to which it is benchmarked. This will not be the case for any time period beyond one day. Due to the nature of compounding, it would be virtually impossible to produce a total return that is exactly opposite the total return of an inverse fund's benchmark index over any time frame beyond one day. Due to the increased risks of leveraged ETFs and inverse ETFs, the Program is suitable only for investors who are able to withstand significant volatility in the value of their Program investment, and who do not foresee the need to liquidate their investment for at least 3 years.

WEB-BASED INFORMATION

Web-based information and advice have significant limitations that prospective clients or their financial advisers should consider before relying on such information provided or before subscribing to advertised services. Specifically, in a web-based arrangement, a client does not receive the benefits of face-to-face, telephone, or otherwise individualized interaction with an Adviser, therefore limiting the client's or their financial adviser's ability to ask questions or relay important information. Therefore, the Adviser encourages follow-up with individualized informational meetings where it can specifically address any questions arising from the information presented herein.

TERMINOLOGY AND DEFINITIONS

Alpha – Alpha is used as a measure of the value added by a manager, as compared to a passive portfolio that has the same market sensitivity or beta. An alpha of 1.0 means the fund outperformed the market 1.0%, when adjusted for market risk.

Annualized Returns – Returns for periods longer than one year are expressed as annualized returns. This is equivalent to the compound rate of return which, over a certain period of time, would produce an investment's total return over that same period.

Beta – Beta is used to evaluate portfolio risk in terms of sensitivity to market movements (systematic risk). A beta greater than 1.0 indicates that portfolio will be more volatile than the market (the utilized benchmark).

Blended Benchmark – The value represents the weighted allocations to the benchmarks associated to the recommended product array. An example of 60% Equity/40% Fixed Income.

Cash or Cash Equivalents: This class is designated to represent the performance of an unmanaged portfolio of 90-day Treasury bills. Being short term and U.S. guaranteed, the asset class carries little currency or little interest rate risk and represents extremely safe investments.

Corporate Bonds: A debt security issued by a corporation and sold to investors. The backing for the bond is usually the payment ability of the company, which is typically money to be earned from future operations. In some cases, the company's physical assets may be used as collateral for bonds. Corporate bonds are considered higher risk than government bonds. The bond rating will determine the credit rating of the investment.

Down Capture – The down-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has fallen.

Drawdown – The high-to-low decline during a specific record period of an investment. A drawdown is usually quoted as the percentage between the peak and the trough.

Emerging Markets: A term used to describe the foreign stocks of less developed countries that are open to foreign investment by institutional investors. Investments in this class are subject to stock market volatility, currency risks as well as the potential to carry a higher than average risk of liquidity and political uncertainty.

Global Fixed Income: An investment in a blend of foreign fixed income products.

TERMINOLOGY AND DEFINITIONS (CONTINUED)

High Yield Bonds: A high paying bond with a lower credit rating (usually below BBB from SP or below BAA from Moody's) than investment grade corporate bonds, Treasury bonds and municipal bonds. Because of the higher risk of default these bonds pay a higher yield than investment grade bonds.

International Large Cap: A term used by the investment community to refer to foreign-based companies with a market capitalization value of more than \$10 billion. Large cap is an abbreviation of the term 'large market capitalization.' Stocks in this asset class generally have high to moderate liquidity and are generally sensitive to both economic sector and industry group performance.

International Small Cap: A term used by the investment community to refer to foreign-based companies with a market capitalization between \$300 million and \$2 billion. Small cap is an abbreviation for the term small capitalization.' Stocks in this asset class generally have less liquidity than Large Cap stocks and can be somewhat less sensitive to economic sector and industry performance but can be more volatile.

Information Ratio – A ratio of portfolio returns above the returns of a benchmark (usually an index) to the volatility of those returns. The information ratio (IR) measures a portfolio manager's ability to generate excess returns relative to a benchmark, but also attempts to identify the consistency of the investor. This ratio will identify if a manager has beaten the benchmark by a lot in a few months or a little every month.

Intermediate Term Government Bonds: An investment in intermediate term (generally more than ten years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk but are sensitive to interest rate risk.

Long term Government Bonds: An investment in long-term (generally more than ten years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk but are sensitive to interest rate risk.

Real Estate/REITS: A term used to describe a security that sells like a stock on the major exchanges and invests in real estate directly, either through properties or mortgages. Investing in REITS is a liquid, dividend paying means of participating in the real estate market however they may be subject to varying degrees of interest rate risk and may be subject to geographic real property risks (i.e. earthquakes, floods, etc.)

Sharpe Ratio – Sharpe ratio is defined as the ratio of the manager's arithmetically annualized excess return over the annual standard deviation of the excess return.

TERMINOLOGY AND DEFINITIONS (CONTINUED)

Short Term Government Bonds: An investment in short term (generally one to three years) government fixed-rate debt issues. Investments in this asset class generally have a low credit risk and are moderately sensitive to interest rate risk.

Standard Deviation – A statistical measure of the historical volatility of a mutual fund or portfolio, usually computed using 36 monthly returns. More generally, a measure of the extent to which numbers are spread around their average.

Tracking Error – A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.

Up Capture – The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen.

U.S. Fixed Income: An investment in a blend of U.S. fixed income products.

U.S. Large Cap Value: A term used by the investment community to refer to U.S. based companies with a market capitalization value of more than \$10 billion. Large cap is an abbreviation of the term 'large market capitalization.' A Value Stock is one that tends to trade at a lower price relative to its fundamentals (i.e. dividends, earnings, sales, etc.) and thus considered undervalued by value investors. Stocks in this asset class generally have high to moderate liquidity and are generally sensitive to both economic sector and industry group performance.

U.S. Mid Cap Growth: A term used by the investment community to refer to U.S.-based companies with a market capitalization between \$2 and \$10 billion. Mid cap is an abbreviation for the term 'middle capitalization.' A Growth Stock is one whose earnings are expected to grow at an above-average rate relative to the market. A Growth Stock company is more likely to retain earnings to reinvest in capital projects versus pay dividends. Stocks in this asset class typically provide adequate liquidity and are sensitive to their economic sector and industry performance.

U.S. Small Cap: A term used by the investment community to refer to U.S.-based companies with a market capitalization between \$300 million and \$2 billion. Small cap is an abbreviation for the term 'small capitalization.' Stocks in this asset class generally have less liquidity than Large Cap stocks and can be somewhat less sensitive to economic sector and industry performance but can be more volatile.

U.S. Micro Cap: A term used by the investment community to refer to U.S.-based companies with a market capitalization between \$30 and \$300 million. The term Micro cap is applied to companies with low or micro capitalization. Stocks in this asset class are extremely sensitive to their economic sector and industry performance and can be very volatile.

World Stock: A term used to describe a combination of foreign stocks having more than 20% of its market capitalization invested in the United States.
